**Appendices**

- Appendix A – Existing Turning Movement Counts (TMC)
- Appendix B – Existing Average Daily Traffic (ADT) Counts
- Appendix C - Level of Service (LOS) Analysis Reports for Existing Conditions
- Appendix D - Collision Data
- Appendix E – Peak Hour Signal Warrant Analysis Worksheets
- Appendix F – Level of Service (LOS) Analysis Reports for Existing Conditions Mitigations
- Appendix G – Level of Service (LOS) Analysis Reports for Future Conditions

### EXECUTIVE SUMMARY

The Citywide Multimodal Improvement Plan (MIP) is a planning document that identifies measures to improve transportation conditions for multiple modes of transportation on the roadway network. The MIP does not recommend capacity expansions such as widening intersections and roadway segments.

The Hayward 2040 General Plan's policy direction does not support intersection and street widening as a strategy. This is due to limited space for additional right-of-way, increased crossing distance for pedestrians, induced demands, and other issues related to the City's desired future character. Instead, the City directs future actions to include transportation demand management, operational improvements, and multimodal improvements.

Two amendments to the Hayward 2040 General Plan establish Vehicle Miles Traveled (VMT) thresholds for California Environmental Quality Act (CEQA) analysis and Greenhouse Gas (GHG) emission reduction goals. Senate Bill 743 (SB 743) requires cities to evaluate transportation impacts with metrics that support greenhouse gas reduction, multimodal transportation networks, and diversification of land uses. SB 743 shifts the measures of performance from vehicle level of service (LOS) to vehicle miles traveled (VMT). VMT is the total miles of travel by personal motorized vehicles a project is expected to generate in a day. VMT measures the full distance of personal motorized vehicle trips with one end within the project. Use of the VMT metric allows projects to look at regional impacts rather than local and provides a more accurate measure of transportation impacts. As per the General Plan Amendments, the City considers LOS guidelines to support the expansion of a multimodal network for projects that increase transit ridership, biking, and walking, thus, this study evaluates impacts based on LOS guidelines.

The MIP was developed based on the City's recent transportation and land use plans and policies. The bicycle and pedestrian improvements presented in this report are based on the City's recent Bicycle & Pedestrian Master Plan and Hayward Downtown Specific Plan. The vehicular improvements are based on traffic operation analysis conducted in this study by TJKM.

The TJKM Team, in cooperation with the City of Hayward, conducted a comprehensive capacity and safety study of 100 intersections and 15 roadway segments within the City of Hayward to identify impacts resulting from new developments and develop capital improvements to mitigate the impacts. These selected intersections and segments are considered the project study intersections and study segments. The study intersections are evaluated with Level of Service (LOS) D or better as acceptable under Existing Conditions. Under Future Conditions, the study intersections are evaluated with Level of Service (LOS) E or better as acceptable for signalized intersections due to costs of mitigation and limited right-of-way as per the City of Hayward 2040 General Plan, and LOS D or better as acceptable for unsignalized intersections. The study segments are evaluated with LOS standards of LOS D or better as acceptable, except if they are part of the Alameda County Congestion Management Program (CMP) network, in which they are evaluated with standards of LOS E or better as acceptable. **Tables ES1 to ES4** present intersection and roadway segment level of service for existing and future conditions.

**Table ES1** summarizes the intersection operations under Existing Conditions (2019). Under this scenario, 47 study intersections (26 signalized and 21 unsignalized) operate at LOS E or F during

one or both peak periods. The remaining 53 study intersections operate at LOS D or better. Of the 21 unsignalized intersections with failing operations, 15 are one- or two-way stop controlled.

**Table ES2** summarizes the results of the LOS analysis for both directions along roadway segments during a.m. and p.m. peak hours. Under Existing Conditions, all study segments operate at LOS E or better both peak hours, except the following two segments:

- Southbound direction of Foothill Boulevard south of City Center Drive during the a.m. peak hour (Segment #4)
- Both directions of Winton Avenue between I-880 Northbound Ramps and Santa Clara Street (Segment #11)

**Table ES3** summarizes the study intersection operations under Future Conditions (2040). Under this scenario, 47 intersections (24 signalized, 23 unsignalized) operate at unacceptable LOS during the a.m. peak, and 48 intersections (27 signalized, 21 unsignalized) operate at unacceptable LOS during the p.m. peak. The remaining intersections operate at acceptable LOS.

**Table ES4** summarizes the results of the LOS analysis for both directions along roadway segments during a.m. and p.m. peak hours. Under Future Conditions, nine study segments operate at unacceptable LOS E or F during at least one peak period, in one or both directions. The remaining six segments operate at acceptable LOS D or better in both directions, during both a.m. and p.m. peaks.

Notes:

<sup>1</sup>Delay: Average control delay in seconds per vehicle, reported values are overall for signalized and all-way-stop-control intersections; and critical minor approaches for two-way-stop-control intersections.

<sup>2</sup>LOS: Level of Service.

\* 2000 HCM Methodology is used.

\*\* Intersection LOS evaluated in Traffix software.

**Bold** text indicates unacceptable intersection operations.

Notes:

<sup>1</sup>Number of Lanes per direction; Does not include TWLTL medians or turn pockets at intersections.

<sup>2</sup>Capacity = 800 vehicles per hour per lane.

<sup>3</sup>V/C: Volume-to-capacity ratio; Calculated using peak hour Average Daily Traffic (ADT) counts generated from TDM.

<sup>4</sup>LOS: Level of Service.

\*Indicates Alameda CTC Congestion Management Program (CMP) roadway with minimum standards of LOS E or better.

**Bold** indicates unacceptable roadway segment operations.

Based on the analysis results, TJKM provides mitigations to improve intersection operations and roadway segment operations for pedestrians, bicyclists and vehicles. TJKM also considered improvements proposed in the City of Hayward 2040 General Plan, Bicycle and Pedestrian Master Plan, and Downtown Specific Plan. The above-mentioned mitigations and proposed improvements are summarized in Section 5 of this report.

Cost estimates for bicycle, pedestrian and transit improvements were developed via pre-calculated project costs provided in Bicycle and Pedestrian Master Plan while cost estimates for vehicular improvements were developed via typical unit costs for roadway and intersection facilities. **Table ES5** summarizes the total costs calculated for the projects in the City of Hayward. The cost estimates provide in this table are used to calculate the Nexus fee.

**Table ES5: Total Cost Estimates**

Project Category	Low Cost	High Cost	Existing Cost	Future Cost
Bicycle	\$7.3 million	\$18.4 million	-	-
Pedestrian	\$108.3 million	\$124 million	-	-
Transit	\$1.9 million	\$14.9 million		
Vehicle	-	-	\$5.2 million	\$25.1 million

Traffic Impact Fees are one-time fees typically paid prior to the issuance of a building permit and imposed on development projects by local agencies responsible for regulating land use. The fee’s purpose is to help mitigate the transportation impacts of development growth. As an applicant proposes a project, a project-specific traffic impact study may be necessary, as this document only addresses cumulative impacts of all projects, but does not address specific impacts from a proposed development. The development of the MIP Nexus fee program involved the major tasks described below.

1. **List of Projects** The MIP includes the list of projects for the TIF program. All projects identified for inclusion in the fee program were presented in Chapter 5 of this report.
2. **Project Costs** The projects had low-cost and high-cost alternatives and were categorized into short-term, near-term and long-term improvements as part of the Action Plan. The project costs were identified in Chapter 5 of this report. The existing cost for vehicular improvements was adjusted to account for existing deficiencies since the full existing cost is not eligible for TIF funding. Only 20 percent of existing cost for vehicular improvements was added to total vehicular improvement cost.
3. **Trip Generation** An estimate was prepared of the A.M. and P.M. peak hour trip generation that will result from development of the expected future land uses within the City of Hayward.
4. **Cost per Trip** A cost per trip was calculated along with the corresponding schedule of fees. The schedule of fees includes fee categories for residential units, hotel, office, school, service/retail and other standard land uses.

**Table ES6** presents a summary of the TIF improvement project costs, the projected future trips to be added by new development, and the resulting estimated TIF improvement cost per trip. The total costs of the TIF projects to be included are \$143,636,200 (low cost) and \$183,483,624 (high cost). State law allows the City to include costs associated with administering the Fee program in the Fee. These administrative tasks include required reporting and enforcement, and are conservatively estimated at 1% of the total project costs.

The fee calculation is based on trip generation and the cost estimates of the TIF improvement projects. The TIF improvement project costs as well as the calculated new TIF cost per trip are shown in **Table ES6**.

**Table ES6: Cost Per Trip Estimate**

	A.M. Peak Hour		P.M. Peak Hour	
	Low Cost	High Cost	Low Cost	High Cost
All Projects	\$143,636,200	\$183,483,624	\$143,636,200	\$183,483,624
Plus Administrative Costs (1%)	\$1,436,362	\$1,834,836	\$1,436,362	\$1,834,836
Total TIF Funding	\$145,072,562	\$185,318,460	\$145,072,562	\$185,318,460
Total Peak Hour Trips Added by New Development	10,495	10,495	12,524	12,524
<b>TIF Cost Per Trip</b>	<b>\$13,824</b>	<b>\$17,659</b>	<b>\$11,584</b>	<b>\$14,797</b>

**Table ES7** and **Table ES8** present the new schedule of fees. The land use categories in this fee schedule have been determined based on a range of expected development land use types. The fees are calculated by multiplying the ITE trip rates contained in *Trip Generation, 10<sup>th</sup> Edition* for the A.M. and P.M. peak period by the cost per trip.

The resulting fee rate, shown in the last columns of **Table ES7** and **Table ES8** are the rate per dwelling unit for residential development, per employee for lodging development, or per thousand square feet (KSF) for non-residential development. Trip rate factor for retail land use was adjusted (reduce 60%) to account for pass-by trips. Trip rate factor for gas station was adjusted (reduced 70%) to account for pass-by trips.

**Table ES7: Calculations of Fees based on A.M. trips (Per KSF<sup>1</sup> unless noted)**

Land Use Category	A.M. Trip Rate <sup>2</sup>	Cost Per A.M. Trip		Fee Rate	
		Low Cost	High Cost	Low Cost	High Cost

### CHAPTER 1. INTRODUCTION

The City of Hayward is a mid-sized, culturally-diverse community that is centrally located within the San Francisco Bay Area. The city is located in Alameda County, approximately 14 miles south of downtown Oakland, 20 miles southeast of downtown San Francisco, and 25 miles north of downtown San Jose. In 2019, the City of Hayward had a population of over 159,000 and has a very diverse population where no single race or ethnicity is in the majority. According to the 2010 census, the largest ethnic group in the City of Hayward is Hispanic or Latino, which represents over 40 percent of the population.

Land uses in the City of Hayward are commercial, residential, industrial or other urban uses. The majority of City of Hayward's single-family homes were built between 1950 and 1960 and multi-family homes were built between 1960 and 1990. The City of Hayward experienced a boom in commercial and industrial construction during the late 1990's.

The City of Hayward has an extensive regional transportation network. Interstate 880; State Routes (SR) 92, 238, and 185; two BART lines; and one Amtrak line traverse through the City and provide residents and businesses convenient access to the Bay Area's major employment centers and ports via two stations.

The TJKM Team, in cooperation with the City of Hayward, has prepared the Citywide Multimodal Improvement Plan and the Traffic Impact Fee (Nexus Fee).

The Citywide Multimodal Improvement Plan (MIP) is the planning document that identifies measures to improve transportation conditions on the roadway network instead of making physical traffic capacity expansions such as widening an intersection or roadway.

The Hayward 2040 General Plan's policy direction does not support intersection and street widening as a strategy. This is due to limited space for additional right-of-way, increased crossing distance for pedestrians, induced demands, and other issues related to the City's desired future character. Instead, the City directs future actions to include transportation demand management, operational improvements, and multimodal improvements and service.

Two amendments to the Hayward 2040 General Plan establish Vehicle Miles Traveled (VMT) thresholds for California Environmental Quality Act (CEQA) analysis and Greenhouse Gas (GHG) emission reduction goals. Senate Bill 743 (SB 743) requires cities to evaluate transportation impacts with metrics that support greenhouse gas reduction, multimodal transportation networks, and diversification of land uses. SB 743 shifts the measures of performance from vehicle level of service (LOS) to vehicle miles traveled (VMT). VMT is the total miles of travel by personal motorized vehicles a project is expected to generate in a day. VMT measures the full distance of personal motorized vehicle trips with one end within the project. Use of the VMT metric allows projects to look at regional impacts rather than local and provides a more accurate measure of transportation impacts. As per the General Plan Amendments, the City considers LOS guidelines to support the expansion of a multimodal network for projects that increase transit ridership, biking, and walking, thus, this study evaluates impacts based on LOS guidelines.

Traffic Impact Fees are one-time fees typically paid prior to the issuance of a building permit and imposed on development projects by local agencies responsible for regulating land use. The

fee's purpose is to help mitigate the transportation impacts of development growth. As an applicant proposes a project, a project-specific traffic impact study may be necessary, as this document only addresses cumulative impacts of all projects, but does not address specific impacts from a proposed development. In addition to fees and projects considered in this document, other on-site, frontage, and off-site improvements directly associated with future projects may be required. A project-specific traffic impact study will assess this.

This report includes the following seven sections:

1. Introduction
2. Existing Conditions Analysis
3. Developing Traffic Forecast and Future Conditions Analysis
4. Document Review
5. Multimodal Improvement Projects and Action Plan
6. Nexus Study
7. Conclusion

## CHAPTER 2. EXISTING CONDITIONS ANALYSIS

### Introduction

The TJKM Team, in cooperation with the City of Hayward, conducted a comprehensive capacity and safety study of 100 intersections and 15 roadway segments within the City of Hayward to identify impacts resulting from new developments and develop capital improvements to mitigate the impacts. These selected intersections and segments are considered the project study intersections and study segments. A related aspect of the project is the preparation of a Capital Improvement Program, which will be designed to address and mitigate the traffic impacts resulting from future development within the City.

The purpose of this section is to present the existing conditions of the study intersections and roadway segments.

The project study area is divided into three different zones, which are shown in **Figures 1, 2 and 3**.

# Project Vicinity Map - Zone 1

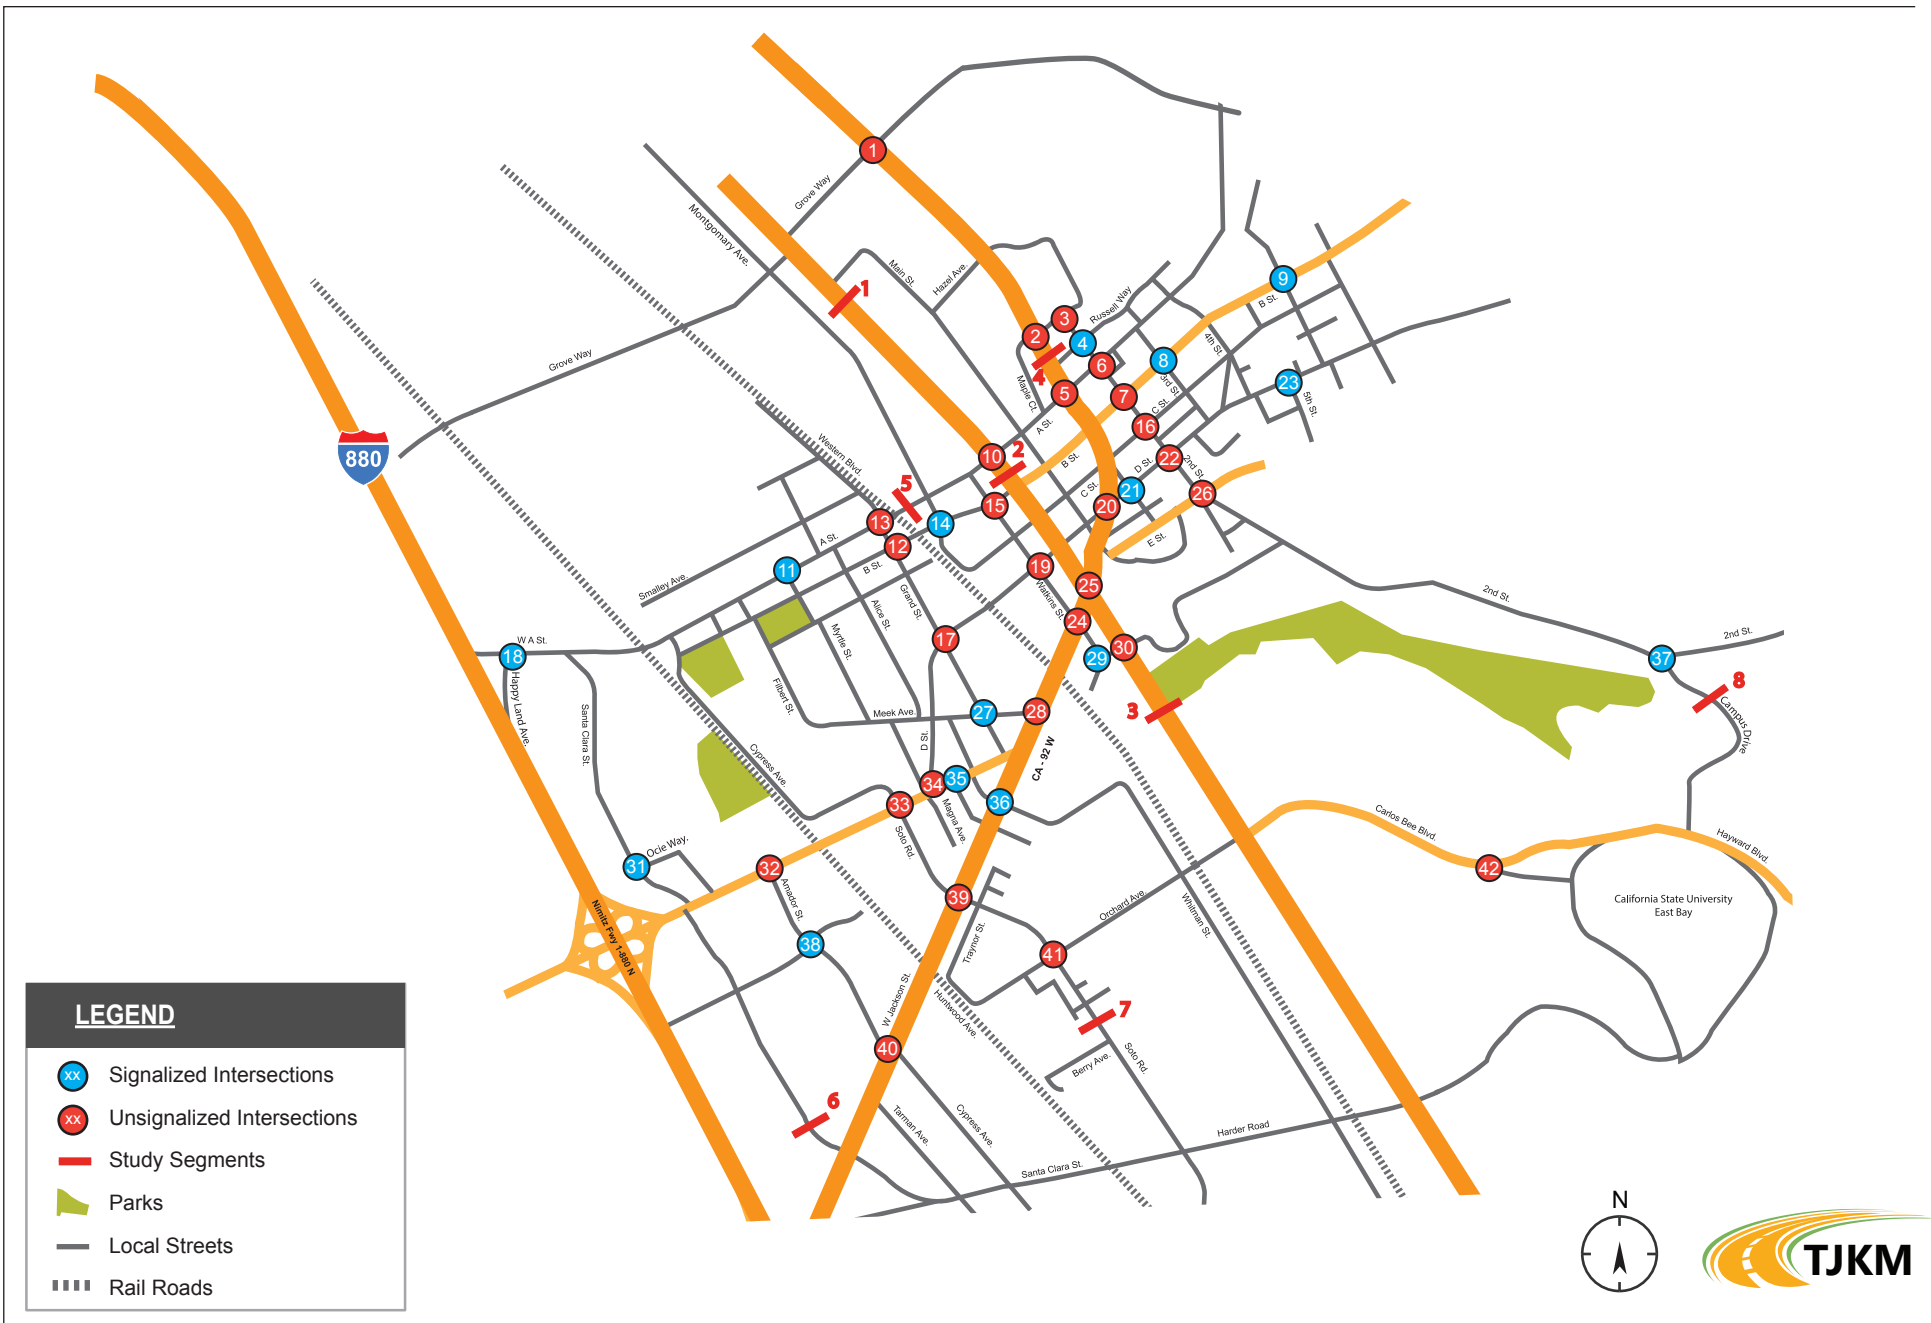

Figure - 1

# Project Vicinity Map - Zone 2

### **Existing Roadway Network**

This section describes the existing roadway system within the study area.

**Foothill Boulevard** is a six-lane, north-south arterial with occasional raised medians. Posted speed limits vary from 25 mph to 35 mph within the study area. This roadway provides local access to residential and commercial developments and the I-580 and I-238 freeways. This corridor is part of the Hayward Loop and operates one-way northbound from Mission Boulevard/Jackson Street to "A" Street.

**Mission Boulevard** is a four- to six-lane, north-south arterial with a raised median that runs intermittently throughout the corridor. The posted speed limit is 25 mph to 35 mph within the study area. This roadway provides local access to residential and commercial developments, but also serves as a regional facility from Oakland (as International Boulevard/SR 185) to Fremont. This corridor is part of the Hayward Loop and operates one-way southbound from "A" Street to Foothill Boulevard.

**City Center Drive** is a two- to four-lane, semi-circle roadway from Hazel Avenue and terminating at McKeever Avenue. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential and commercial developments.

**A Street** is a four- to six-lane, east-west collector from Skywest Drive and terminating at Redwood Road. The posted speed limit is 25 mph to 35 mph within the study area. This roadway is part of the Hayward Loop and becomes one-way westbound from Foothill Boulevard to Mission Boulevard. This corridor provides local access to residential areas, Downtown Hayward commercial developments, and the I-580 and I-880 freeways.

**B Street** is a two- to four-lane, east-west roadway from Martin Luther King Drive and terminating at Center Street/Kelly Street. B Street functions as a local roadway west of Mission Boulevard and a collector roadway east of Mission Boulevard. The posted speed limit is 25 mph within the study area. This becomes a one-way westbound corridor from Foothill Boulevard to Mission Boulevard. This roadway provides local access to residential areas, Downtown Hayward commercial developments, and the Hayward Amtrak station.

**C Street** is a two- to four-lane, east-west roadway from Montgomery Avenue and terminating at 7<sup>th</sup> Street. This roadway provides local access to residential developments. The posted speed limit is 25 mph within the study area.

**D Street** is a four-lane, east-west roadway from Winton Avenue and terminating at Machado Court. This roadway provides local access to residential areas and Downtown Hayward commercial developments. The posted speed limit is 25 mph to 35 mph within the study area.

**E Street** is a two-lane, east-west roadway from Main Street and terminating east of Wilma Way. This roadway provides local access to residential developments. The posted speed limit is 25 mph within the study area.

**1<sup>st</sup> Street** is a two-lane, north-south roadway from C Street and terminating at E Street. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential developments.

**2<sup>nd</sup> Street** is a two- to four-lane, north-south roadway from City Center Drive and terminating at Windfeldt Road. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential developments.

**3<sup>rd</sup> Street** is a two-lane, north-south roadway from A Street and terminating at D Street. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential developments.

**6<sup>th</sup> Street** is a two-lane, north-south roadway from north of Stafford Avenue and terminating at D Street. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential developments.

**Campus Drive** is a two-lane, north-south roadway from 2<sup>nd</sup> Street and terminating at Hayward Boulevard. The posted speed limit is 30 mph within the study area. This roadway provides local access to residential developments.

**Watkins Street** is a two-lane, north-south roadway from A Street and terminating at Fletcher Lane. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential and commercial developments.

**Grand Street** is a four-lane, north-south roadway from A Street and terminating at Jackson Street. The posted speed limit is 25 mph to 35 mph within the study area. This roadway provides local access to residential developments.

**Jackson Street** is a six-lane, east-west arterial from Mission Boulevard and terminating at Santa Clara Street. After Santa Clara Street, Jackson Street continues into SR 92. The posted speed limit is 30 mph to 40 mph within the study area. This roadway provides local access to residential areas and commercial developments.

**Soto Road** is a two-lane, north-south roadway from Winton Avenue and terminating at Harder Road. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential developments.

**Carlos Bee Boulevard** is a four-lane, east-west collector roadway that extends from Mission Boulevard and terminates at Hayward Boulevard. The posted speed limit is 30 mph within the study area. This roadway provides local access to residential and commercial developments.

**Hayward Boulevard** is a four-lane, east-west collector roadway beginning at Carlos Bee Boulevard and terminating at Fairview Avenue. The posted speed limit is 30 mph within the study area. This roadway provides local access to residential and commercial developments.

**Amador Street** is a two-lane, north-south roadway from Amador Village Circle and terminating at Cypress Avenue. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential developments.

**Santa Clara Street** is a two-lane to four-lane, north-south collector roadway that extends between West A Street and Harder Road. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential developments.

**Harder Road** is a two- to four-lane, east-west collector from Jackson Street and terminating at Old Hillary Road. The posted speed is 25 mph to 35 mph within the study area. This roadway provides local access to residential developments.

**Cypress Avenue** is a two-lane, north-south roadway from Jackson Street and terminating at West Harder Road. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential developments.

**Tennyson Road** is a four-lane, east-west arterial extending from Mountain View Drive to Industrial Boulevard. The posted speed limit is 25 mph to 35 mph within the study area. This roadway provides local access to residential and commercial developments.

**Ruus Road** is a two-lane, north-south roadway from West Tennyson Road and terminating at Industrial Parkway West. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential developments.

**Industrial Boulevard** is a four-lane, north-south collector roadway between Clawiter Road and Hesperian Boulevard. It provides access to I-880 to the north and the SR 92 freeway to the south. The posted speed limit is 35 mph within the study area. This roadway provides local access to residential and commercial developments.

**Industrial Parkway West** is four-lane, east-west collector roadway, extending from Mission Boulevard to Hesperian Boulevard. The posted speed limit is 45 mph within the study area. This roadway provides local access to commercial developments.

**Baumberg Avenue/Arden Road** is a two-lane collector roadway between Portsmouth Avenue and Eden Landing Road. Along this route, Baumberg Avenue becomes Arden Road. The posted speed limit is 25 mph in the within the study area. This roadway provides local access to industrial developments.

**Industrial Parkway SW** is a four-lane, north-south arterial extending from Whipple Road to Industrial Parkway West. The Whipple Road interchange at I-880 connects directly to Industrial Parkway SW. The posted speed limit is 35 mph to 45 mph within the study area. This roadway provides local access to residential and commercial developments.

**Huntwood Avenue** is a two- to four-lane, north-south collector roadway with a posted speed limit of 25mph to 30 mph within the study area. Huntwood Avenue extends between Whipple Road to the south and Jackson Street to the north. This roadway provides local access to residential and commercial developments.

**Whipple Road** is a two- to four-lane, east-west collector roadway with a posted speed limit of 30 mph to 40 mph within the study area. Whipple Road connects to Horner Street and extends to Mission Boulevard. This roadway provides local access to residential and commercial developments.

**Calaroga Avenue** is a two- to four-lane, north-south roadway from La Playa Drive and terminating at Catalpa Way. The posted speed limit is 25 mph within the study area. This roadway collector provides local access to residential neighborhoods.

**Patrick Avenue** is a two-lane, north-south roadway from Tennyson Road and terminating at Schafer Road. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential developments.

**Hesperian Boulevard** is a six-lane, north-south arterial that extends from E 14<sup>th</sup> Street and terminates at Alameda Creek. Posted speed limit is 35 mph within the study area. This roadway provides local access to residential and commercial developments and the I-92, I-880 and I-238 freeways.

**W Winton Avenue** is a six-lane, east-west roadway extending from D Street and terminating at Jackson Street. W Winton Avenue functions as a collector roadway east of D Street and as an arterial west of D Street. The posted speed limit is 35 mph within the study area. This roadway provides local access to residential and commercial developments.

**Clawiter Road** is a four-lane, north-south, collector roadway extending south of Industrial Boulevard and as an arterial north of Industrial Boulevard. The posted speed limit is 35 mph to 40 mph within the study area. This roadway provides access to residential developments.

**Depot Road** is a two- to four-lane, east-west roadway west of Hesperian Boulevard. The posted speed limit is 25 mph within the study area. This roadway provides access to residential and Industrial developments.

**La Playa Drive** is a six-lane roadway between Hesperian Boulevard and Southland Drive. The posted speed limit is 25 mph within the study area. This roadway provides access to residential and commercial developments.

**Panama Street** is a two-lane, east-west roadway between Hesperian Boulevard and Decatur Way. The posted speed limit is 25 mph within the study area. This roadway provides access to residential developments.

**Catalpa Way** is a two-lane, east-west roadway between Hesperian Boulevard and Hesse Drive. The posted speed limit is 25 mph within the study area. This roadway provides access to residential developments.

**Walpert Street** is a two-lane, east-west roadway between 2<sup>nd</sup> Street and Fletcher Lane. The posted speed limit is 25 mph within the study area. This roadway has horizontal and vertical curves and provides local access to residential developments.

**Fletcher Lane** is a two-lane, east-west roadway from Walpert Street and terminating in a cul-de-sac west of Watkins Street. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential and commercial developments.

**Grove Way** is a two- to four-lane, east-west, collector roadway extending from East Castro Valley Boulevard and terminating at Meekland Avenue in unincorporated Alameda County. The posted speed limit is 25 mph within the study area. This roadway collector provides local access to residential neighborhoods.

**Montgomery Street** is a two-lane, north-south roadway between Medford Avenue and C Street. The posted speed limit is 25 mph within the study area. This roadway provides access to residential developments.

**Meek Avenue** is a two-lane, east-west roadway between Jackson Street and Filbert Street. The posted speed limit is 25 mph within the study area. This roadway provides access to residential neighborhoods.

**Alice Street** is a two-lane, east-west roadway between A Street and Meek Avenue. The posted speed limit is 25 mph within the study area. This roadway provides access to residential neighborhoods.

**Eden Shores Boulevard** is a four-lane, east-west roadway west of Hesperian Boulevard. The posted speed limit is 25 mph within the study area. This roadway provides access to commercial developments.

**Marina Drive** is a two-lane, north-south roadway between Industrial Boulevard and Eden Park Place. The posted speed limit is 25 mph within the study area. This roadway provides access to residential developments.

**Pompano Avenue** is a two-lane, north-south roadway from Tennyson Road and terminating at Folsom Avenue. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential neighborhoods.

**Tampa Avenue** is a two-lane, north-south roadway from Gomer Street and terminating at Avila Court. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential neighborhoods.

**Dickens Avenue** is a two-lane, north-south roadway from Tennyson Road and terminating at Folsom Avenue. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential neighborhoods.

**Tyrell Avenue** is a two-lane, north-south roadway from Tennyson Road and terminating at Schafer Road. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential developments.

**Harvey Avenue** is a two-lane, north-south roadway from Tennyson Road and terminating at Folsom Avenue. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential neighborhoods.

**Whitman Street** is a two-lane, north-south roadway from Tennyson Road and terminating at Sycamore Avenue. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential developments.

**Dixon Street** is a two-lane, north-south roadway from Tennyson Road and terminating at Industrial Parkway. The posted speed limit is 25 mph within the study area. This roadway provides local access to residential and Industrial developments.

**Existing Bicycle Facilities**

There are four bicycle lane classes, as defined below:

- **Bicycle Paths (Class I)** – A path physically separated from motor vehicle traffic by an open space or barrier and either within a highway right-of-way or within an independent right-of-way, used by bicyclists, pedestrians, joggers, skater, and other non-motorized travelers. Multi-use paths are the most popular type of facility. Because the availability of uninterrupted rights-of-way is limited, this type of facility may be difficult to locate and expensive to build relative to other types of bicycle and pedestrian facilities, but inexpensive compared to new roadways. Prime locations for bike paths are areas such as power-line easements, utility easements, canal banks, river levees, drainage easements, railroad or highway rights-of-way, or regional community parks.
- **Bicycle Lanes (Class II)** – A portion of a roadway that has been set aside by striping and pavement markings for the preferential or exclusive use of bicyclists. Bike lanes are intended to promote an orderly flow of bicycle and vehicle traffic. This type of facility is established by using the appropriate striping, legends, and signs.
- **Bicycle Routes (Class III)** – Bike routes are facilities shared with motor vehicle traffic. Bike routes must be of benefit to the bicyclist and offer a higher degree of service than adjacent streets. They provide for specific bicycle demand and may be used to connect discontinuous segments of streets with bike facilities. Also, bike routes are located on residential streets and rural roads. If the pavement width is sufficient and traffic volume/speeds warrant, an edge line may be painted to further delineate the bike route. Bike routes are signed with the G-93 Bike Route marker, but no striping or legends are required.
- **Separated Bikeways (Class IV)** – Separated bikeways provide a physical separation from vehicular traffic. This separation may include grade separation, flexible posts, planters or other inflexible barriers, or on-street parking. These bikeways provide some bicyclists a greater sense of comfort and security, especially in the context of high speed roadways. Separated facilities can provide one-way or two-way travel and may be located on either side of a one-way roadway.

According to the latest City of Hayward Bicycle & Pedestrian Master Plan, adopted September 2020, Class I Bike Paths are located on six different corridors as shown in **Table 1**. Existing bicycle facilities within three zone study areas are shown in **Figure 4**, **Figure 5**, and **Figure 6**, respectively.

# Existing Bicycle Facilities - Zone 3

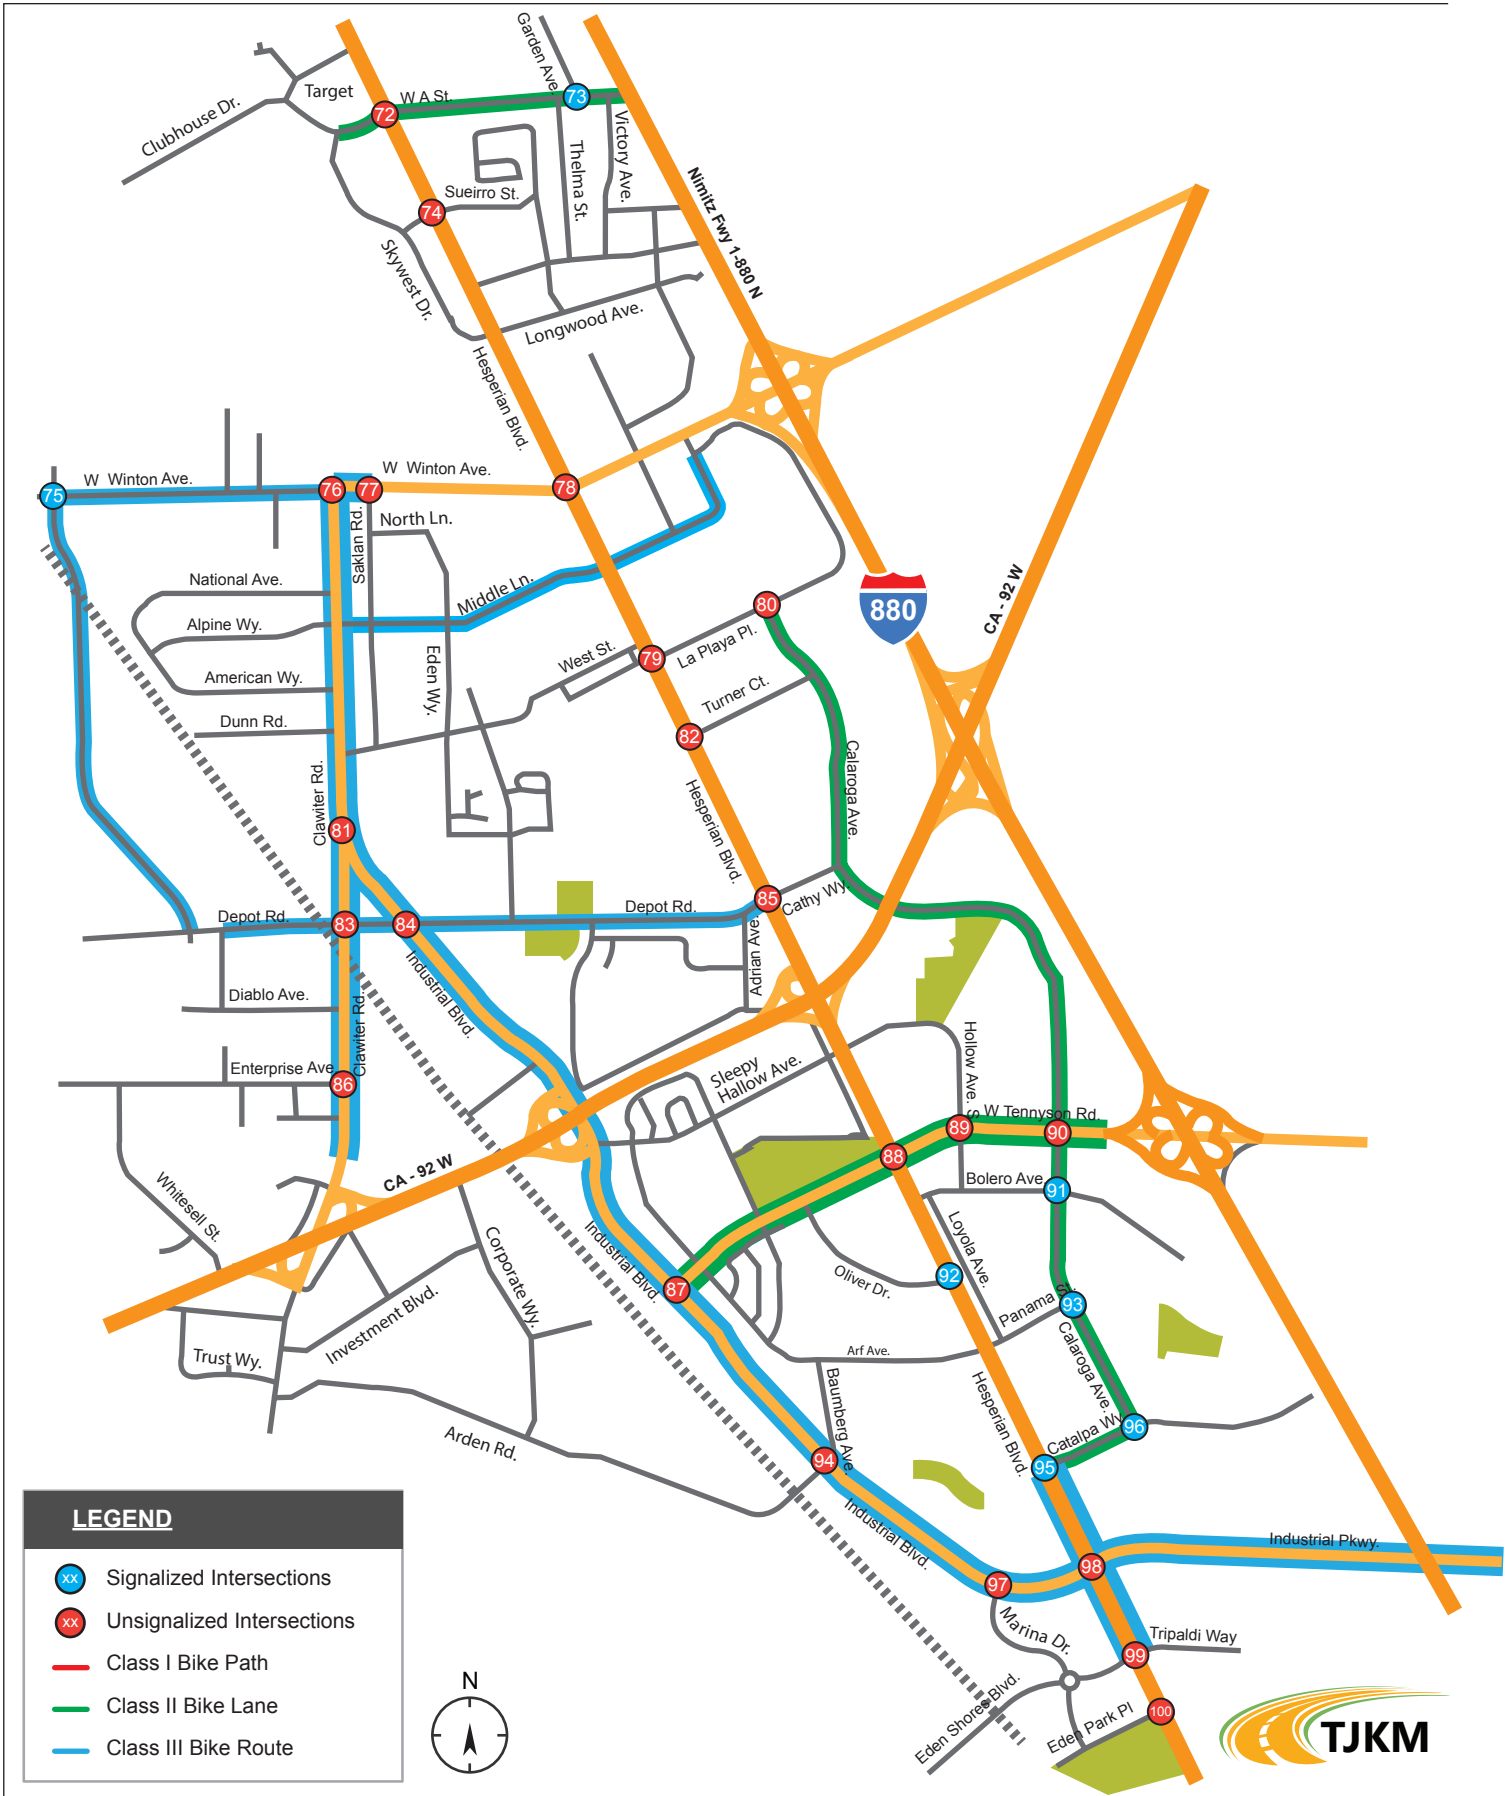

Figure - 6

### ***Existing Pedestrian Facilities***

Walkability is defined as the ability to travel easily and safely between various origins and destinations without having to rely on automobiles or other motorized travel. The ideal “walkable” community includes wide sidewalks, a mix of land uses such as residential, employment, shopping opportunities, a limited number of conflict points with vehicle traffic, easy access to transit facilities, and services.

Pedestrian facilities comprise of crosswalks, sidewalks, pedestrian signals, and off-street paths which provide safe and convenient routes for pedestrians to access destinations such as institutions, businesses, public transportation, and recreation facilities.

Existing pedestrian facilities within three zone study areas are shown in **Figure 7**, **Figure 8**, and **Figure 9**, respectively.

### ***Existing Transit Facilities***

In addition to two BART lines, AC Transit offers local bus transit service on the following routes within the project limit:

- AC Transit Line 60 provides weekday service at 20-minute headways between 6:02 a.m. and 11:50 p.m. and weekend service at 40-minute headways between 6:00 a.m. and 11:44 p.m. The line runs from Cal State East Bay to Chabot College, while providing loop service between the Hayward BART station and 2<sup>nd</sup> Street.
- AC Transit Line 83 provides weekday service at 30-minute headways between 6:00 a.m. and 10:43 p.m. The line runs a loop from the Hayward BART station to the South Hayward BART station with stops along Hesperian Boulevard, Winton Avenue, Industrial Boulevard, and Eden Landing Road.
- AC Transit Line 86 provides service at 30-minute headways between 4:15 a.m. and 12:21 a.m. on weekdays, and 35-minute headways between 5:55 a.m. and 11:33 p.m. on weekends. The line provides service between the South Hayward BART station and the Hayward BART station with stops along Tennyson Road, Industrial Boulevard, and Winton Avenue, and at the AC Transit Hayward Division building.
- AC Transit Line 93 provides weekday service at 37- to 47-minute headways between 5:40 a.m. and 11:13 p.m. and one-hour headways between 6:00 a.m. and 10:48 p.m. on weekends. The line runs a loop from the Hayward BART station and stops along Mission Boulevard.
- AC Transit Line 94 provides weekday service at 65-minute headways between 5:05 a.m. and 9:22 p.m. The line runs a loop from Stonebrae Elementary School to the Hayward BART Station.
- AC Transit Line 95 provides daily service at 40-minute headways between 5:30 a.m. and 8:24 p.m. The line runs between the Hayward BART station and a stop located at Kelly Street and Eddy Street. Line 95 extends service to Bret Harte Middle School and Hayward High School on school days.

- AC Transit Line 97 provides weekday service at 11- to 20-minute headways between 5:37 a.m. and 11:53 p.m., and weekend service at 13- to 33-minute headways between 6:00 a.m. and 11:45 p.m. Line 97 runs between the Union City BART station and the Bay Fair BART Station with stops at Chabot College and along Hesperian Boulevard.
- AC Transit Line 99 provides weekday service at 15- to 20-minute headways between 5:00 a.m. and 1:01 a.m. and 25- to 30-minute headways between 6:00 a.m. and approximately 12:50 a.m. on weekends and holidays. The line runs a loop from the Hayward BART station and stops along Mission Boulevard.
- AC Transit Line 801 provides weekday service at one-hour headways between 11:43 p.m. and 6:32 a.m., and weekend service at one-hour headways between 11:39 p.m. and 7:35 a.m. on Saturdays and between 11:39 p.m. and 8:22 a.m. on Sundays and holidays. The line runs provides service between the Fremont BART station and the 12<sup>th</sup> Street Oakland BART Station with stops at both Hayward BART stations.
- AC Transit Line M provides weekday service at 32- to 43-minute headways between 5:54 a.m. and 5:49 p.m. Line M provides service between the Hayward BART Station and the Hillsdale Shopping Center with a stop at Chabot College.
- AC Transit Line S provides weekday service at 15- to 60-minute headways between 5:10 a.m. and 8:33 a.m. and 30- to 45-minute headways between 4:15 p.m. and 8:00 p.m. Line S provides commuter service between the City of Hayward and the Transbay Terminal in San Francisco.
- AC Transit Line SB provides weekday service at 10- to 45-minute headways between 5:25 a.m. and 9:28 a.m. and 20- to 55-minute headways between 3:30 p.m. and 8:20 p.m. This line runs between the City of Newark and San Francisco with one stop in the City of Hayward.

### **Study Intersections**

TJKM evaluated traffic conditions at 100 study intersections: 70 signalized intersections and 30 un-signalized intersections. The study intersections were selected in consultation with the City of Hayward staff. The peak periods observed were between 7:00-9:00 a.m. and 4:00-6:00 p.m. The study intersections and associated traffic controls are as follows:

1. Foothill Boulevard / Grove Way (Signalized)
2. Foothill Boulevard / City Center Drive (Signalized)
3. City Center Drive / 2<sup>nd</sup> Street (Signalized)
4. 2<sup>nd</sup> Street / Russell Way (Two-Way Stop)
5. Foothill Boulevard / A Street (Signalized)
6. A Street / 2<sup>nd</sup> Street (Signalized)
7. B Street / 2<sup>nd</sup> Street (Signalized)
8. B Street / 3<sup>rd</sup> Street (Two-Way Stop)
9. B Street / 6<sup>th</sup> Street (Two-Way Stop)
10. A Street / Mission Boulevard (Signalized)
11. A Street / Myrtle Street (One-Way Stop)
12. B Street / Grand Street (Signalized)
13. A Street / Grand Street (Signalized)
14. B Street / Montgomery Street (All-Way Stop)
15. B Street / Watkins Street (Signalized)
16. C Street / Second Street (Signalized)
17. D Street / Grand Street (Signalized)
18. A Street / Happyland Avenue (Two-Way Stop)
19. D Street / Watkins Avenue (Signalized)
20. Foothill Boulevard/ D Street (Signalized)
21. D Street / 1<sup>st</sup> Street (Two-Way Stop)
22. D Street / 2<sup>nd</sup> Street (Signalized)
23. D Street / 5<sup>th</sup> Street (One-Way Stop)
24. Watkins Street / Jackson Street (Signalized)
25. Foothill Boulevard / Jackson Street / Mission Boulevard (Signalized)
26. E Street / 2<sup>nd</sup> Street (Signalized)
27. Grand Street / Meek Avenue (All-Way Stop)

28. Meek Avenue / Silva Avenue / Jackson Street (Signalized)
29. Fletcher Lane / Watkins Street (Two-Way Stop)
30. Mission Boulevard/ Fletcher Lane (Signalized)
31. Santa Clara Street / Ocie Way (Two-Way Stop)
32. Amador Street / Winton Avenue (Signalized)
33. Myrtle Street / Soto Road / Winton Avenue (Signalized)
34. D Street / Winton Avenue (Signalized)
35. Park Street / Winton Avenue (Two-Way Stop)
36. Alice Street / Jackson Street (Two-Way Stop)
37. 2<sup>nd</sup> Street / Campus Drive (One-Way Stop)
38. Amador Street / Elmhurst Street (All-Way Stop)
39. Soto Road / Jackson Street (Signalized)
40. Amador Street / Cypress Avenue / Jackson Street (Signalized)
41. Orchard Avenue / Soto Road (Signalized)
42. Carlos Bee Boulevard / Hayward Boulevard (Signalized)
43. Harder Road / Santa Clara Street (Signalized)
44. Cypress Avenue / Harder Road / Underwood Avenue (Signalized)
45. Harder Road / Gading Road (Signalized)
46. Harder Road / Soto Road / Mocine Avenue (Signalized)
47. Harder Road / Jane Avenue (Signalized)
48. Harder Road / Mission Boulevard (Signalized)
49. Patrick Avenue / Gomer Street (All-Way Stop)
50. Patrick Avenue / Roosevelt Avenue (All-Way Stop)
51. Patrick Avenue / Tennyson Road (Signalized)
52. Pompano Avenue / Tennyson Road (Signalized)
53. Tampa Avenue / Tennyson Road (Signalized)
54. Tennyson Road / Dickens Avenue (One-Way Stop)
55. Tyrell Avenue / Tennyson Road (Signalized)
56. Tennyson Road / Harvey Avenue (One-Way Stop)
57. Ruus Road / Tennyson Road (Signalized)
58. Tennyson Road / Baldwin Street (One-Way Stop)

59. Huntwood Avenue / Tennyson Road (Signalized)
60. Beatron Way / Whitman Street / Tennyson Road (Signalized)
61. Tennyson Road / Pacific Street (One-Way Stop)
62. Dixon Street / E 12<sup>th</sup> Street / Tennyson Road (Signalized)
63. Mission Boulevard/ Tennyson Road (Signalized)
64. Ruus Road / Folsom Avenue (All-Way Stop)
65. Industrial Parkway / Stratford Road (Signalized)
66. Industrial Boulevard / Ruus Road (Signalized)
67. Huntwood Avenue / Industrial Parkway (Signalized)
68. Mission Boulevard / Industrial Parkway (Signalized)
69. Huntwood Avenue/ Sandoval Way (Signalized)
70. Huntwood Avenue / Zephyr Avenue (Two-Way Stop)
71. Huntwood Avenue / Whipple Road (Signalized)
72. A Street / Hesperian Boulevard (Signalized)
73. Garden Avenue / A Street (Two-Way Stop)
74. Hesperian Boulevard / Sueirro Street (Signalized)
75. Winton Avenue / Cabot Boulevard (All-Way Stop)
76. Clawiter Road / Winton Avenue (Signalized)
77. Saklan Road / Winton Avenue (Signalized)
78. Winton Avenue / Hesperian Boulevard (Signalized)
79. Hesperian Boulevard / La Playa Drive / West Street (Signalized)
80. La Playa Drive / Calaroga Avenue (Signalized)
81. Clawiter Road / Industrial Boulevard (Signalized)
82. Hesperian Boulevard / Turner Court (Signalized)
83. Clawiter Road / Depot Road (Signalized)
84. Depot Road / Industrial Boulevard (Signalized)
85. Depot Road / Cathy Way / Hesperian Boulevard (Signalized)
86. Clawiter Road / Enterprise Avenue (Signalized)
87. Industrial Boulevard/ Tennyson Road (Signalized)
88. Hesperian Boulevard / Tennyson Road (Signalized)
89. Sleepy Hollow Avenue / Tennyson Road (Signalized)

90. Calaroga Avenue / Tennyson Road (Signalized)
91. Calaroga Avenue / Bolero Avenue (All-Way Stop)
92. Hesperian Boulevard / Oliver Drive (One-Way Stop)
93. Calaroga Avenue / Panama Street (All-Way Stop)
94. Baumberg Avenue / Industrial Boulevard (Signalized)
95. Hesperian Boulevard / Catalpa Way (One-Way Stop)
96. Calaroga Avenue / Catalpa Way (All-Way Stop)
97. Industrial Boulevard/ Marina Drive (Signalized)
98. Hesperian Boulevard / Industrial Boulevard (Signalized)
99. Hesperian Boulevard / Eden Shores Boulevard (Signalized)
100. Hesperian Boulevard / Eden Park Place (Signalized)

The study intersection lane geometry and traffic controls are illustrated in **Figure 10**, **Figure 11**, **Figure 12**, **Figure 13** and **Figure 14**.

### ***Study Segments***

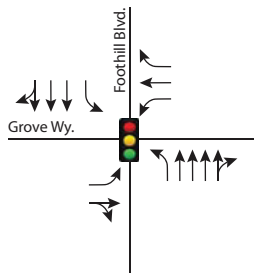

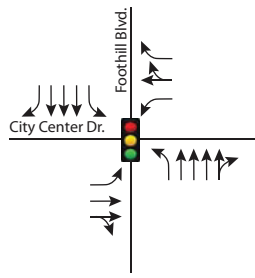

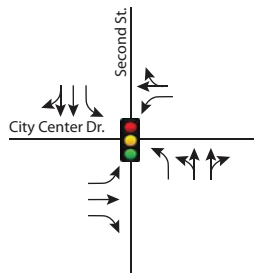

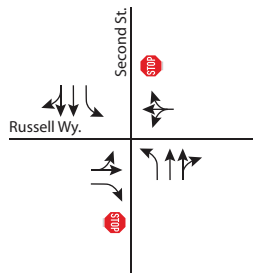

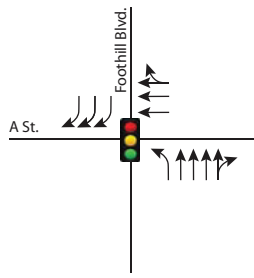

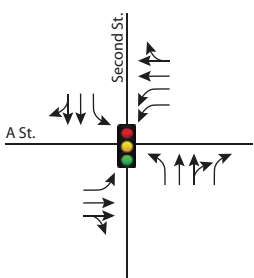

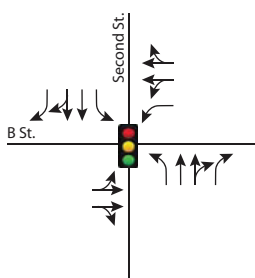

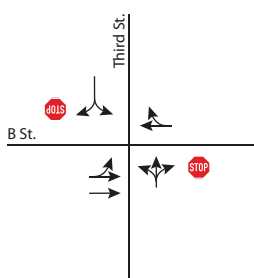

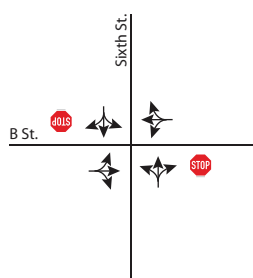

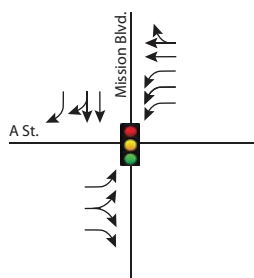

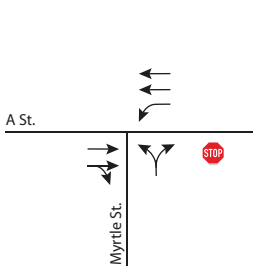

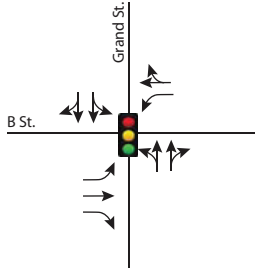

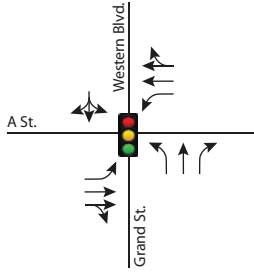

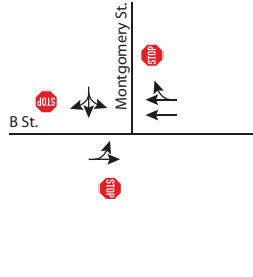

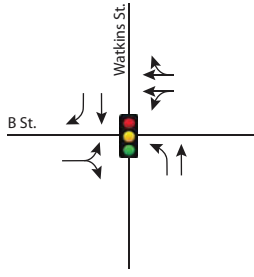

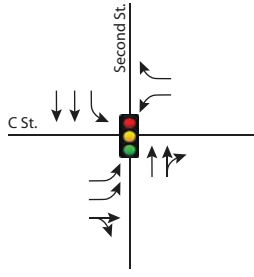

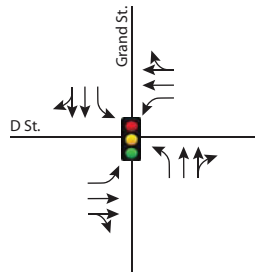

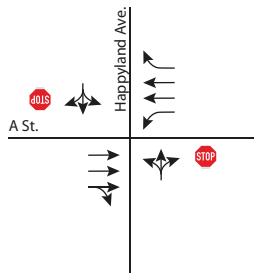

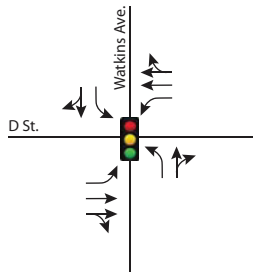

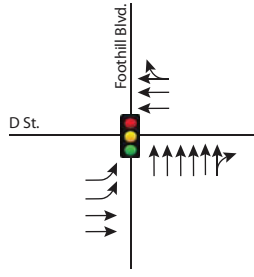

TJKM evaluated traffic conditions at 15 study segments within the project study zones. The study segments were evaluated for both directions during weekday a.m. and p.m. peak periods. The study segments and associated classifications are as follows:

1. Mission Boulevard between Rose Street & Sunset Boulevard (State Route/Arterial)\*
2. Mission Boulevard between A Street & B Street (State Route/Arterial)\*
3. Mission Boulevard between Fletcher Lane & Sycamore Avenue (State Route/Arterial)\*
4. Foothill Boulevard between City Center Drive & Russell Way (Arterial)\*
5. A Street between Western Boulevard & Peralta Street (Arterial)\*
6. Santa Clara Street between Jackson Street & Elmhurst Street (Arterial)
7. Soto Road between Orchard Avenue & Berry Avenue (Collector)
8. Campus Drive between 2<sup>nd</sup> Street & Oakes Drive (Arterial)
9. A Street between Royal Avenue & Hesperian Boulevard (Arterial)
10. Winton Avenue between Wright Drive & Stonewall Avenue (Arterial)\*\*
11. Winton Avenue between I-880 Northbound Ramps & Santa Clara Street (Arterial)\*\*
12. Depot Road between Cabot Boulevard & Industrial Boulevard (Collector)
13. Depot Road between Hesperian Boulevard & Adrian Avenue (Local Road)
14. Industrial Boulevard between Tennyson Road & Baumberg Avenue (Arterial)\*\*
15. Hesperian Boulevard between Panama Street & Catalpa Way (Arterial)\*\*

### Data Collection

This section summarizes the data collection efforts for the City of Hayward Citywide Intersection Improvement Study. Two primary types of data were collected to support the determination of existing conditions: (1) peak hour turning movement volume counts; and (2) signal timings. Intersection level of service (LOS) analysis was performed using the turning movement data for both the a.m. and p.m. peak hours.

#### ***Turning Movement Counts***

TJKM collected the turning movement counts (TMC) for 70 intersections during the a.m. (7:00 – 9:00 a.m.) and p.m. (4:00 – 6:00 p.m.) peak periods between January 28, 2016 and February 11, 2016. These counts were done at each location using manual observations to record the number of vehicles that turn left or right or drive straight through the intersection for each of the intersection approaches. To assure proper data collection on typical traffic days, each day and time were carefully reviewed, and any questionable days/times were eliminated from the data collection schedule. This included identifying school holidays across the city and any events that occurred during the data collection period. During the data collection days and times, no public holidays, special events or weather conditions were observed that could have impacted the usefulness of the collected data. The data was collected on the days and hours representative of normal traffic conditions. Significant construction impacts were not present during the data collection period, thus no data was disqualified from the process. **Appendix A** contains the vehicle, pedestrian, and bicycle turning movement counts for the study intersections.

The remaining 30 intersection volumes were provided by the City of Hayward; however, they were collected in 2014 and 2015. After discussing with the City staff, the 2019 volumes were projected by applying a growth rate of 1.3 percent per year, obtained from the City of Hayward General Plan, to 2014, 2015, and 2016 volumes.

#### ***Signal Timing Plans***

Signal timing plans were obtained from City of Hayward and Caltrans for the studied signalized intersections. The following key parameters were included in the Synchro analysis for every signalized study intersection to accurately model existing conditions:

- Walk Time – This is the amount of time for a pedestrian walk phase. The Walk Time is activated when the signal is on pedestrian recall or when a pedestrian makes a call by pushing the pedestrian push button.
- Flashing Don't Walk Time – This is the amount of time for a pedestrian Flash Don't Walk Phase. This represents the amount of time remaining before the pedestrian phase is completed.
- Minimum Green Time – This is the shortest time that the phase will show green.
- Yellow Time – This is the amount of time for the yellow interval.
- All-Red Time – This is the amount of time for the all-red interval that follows the yellow interval. The all red time should be of sufficient duration to permit the intersection to clear before cross traffic is released.

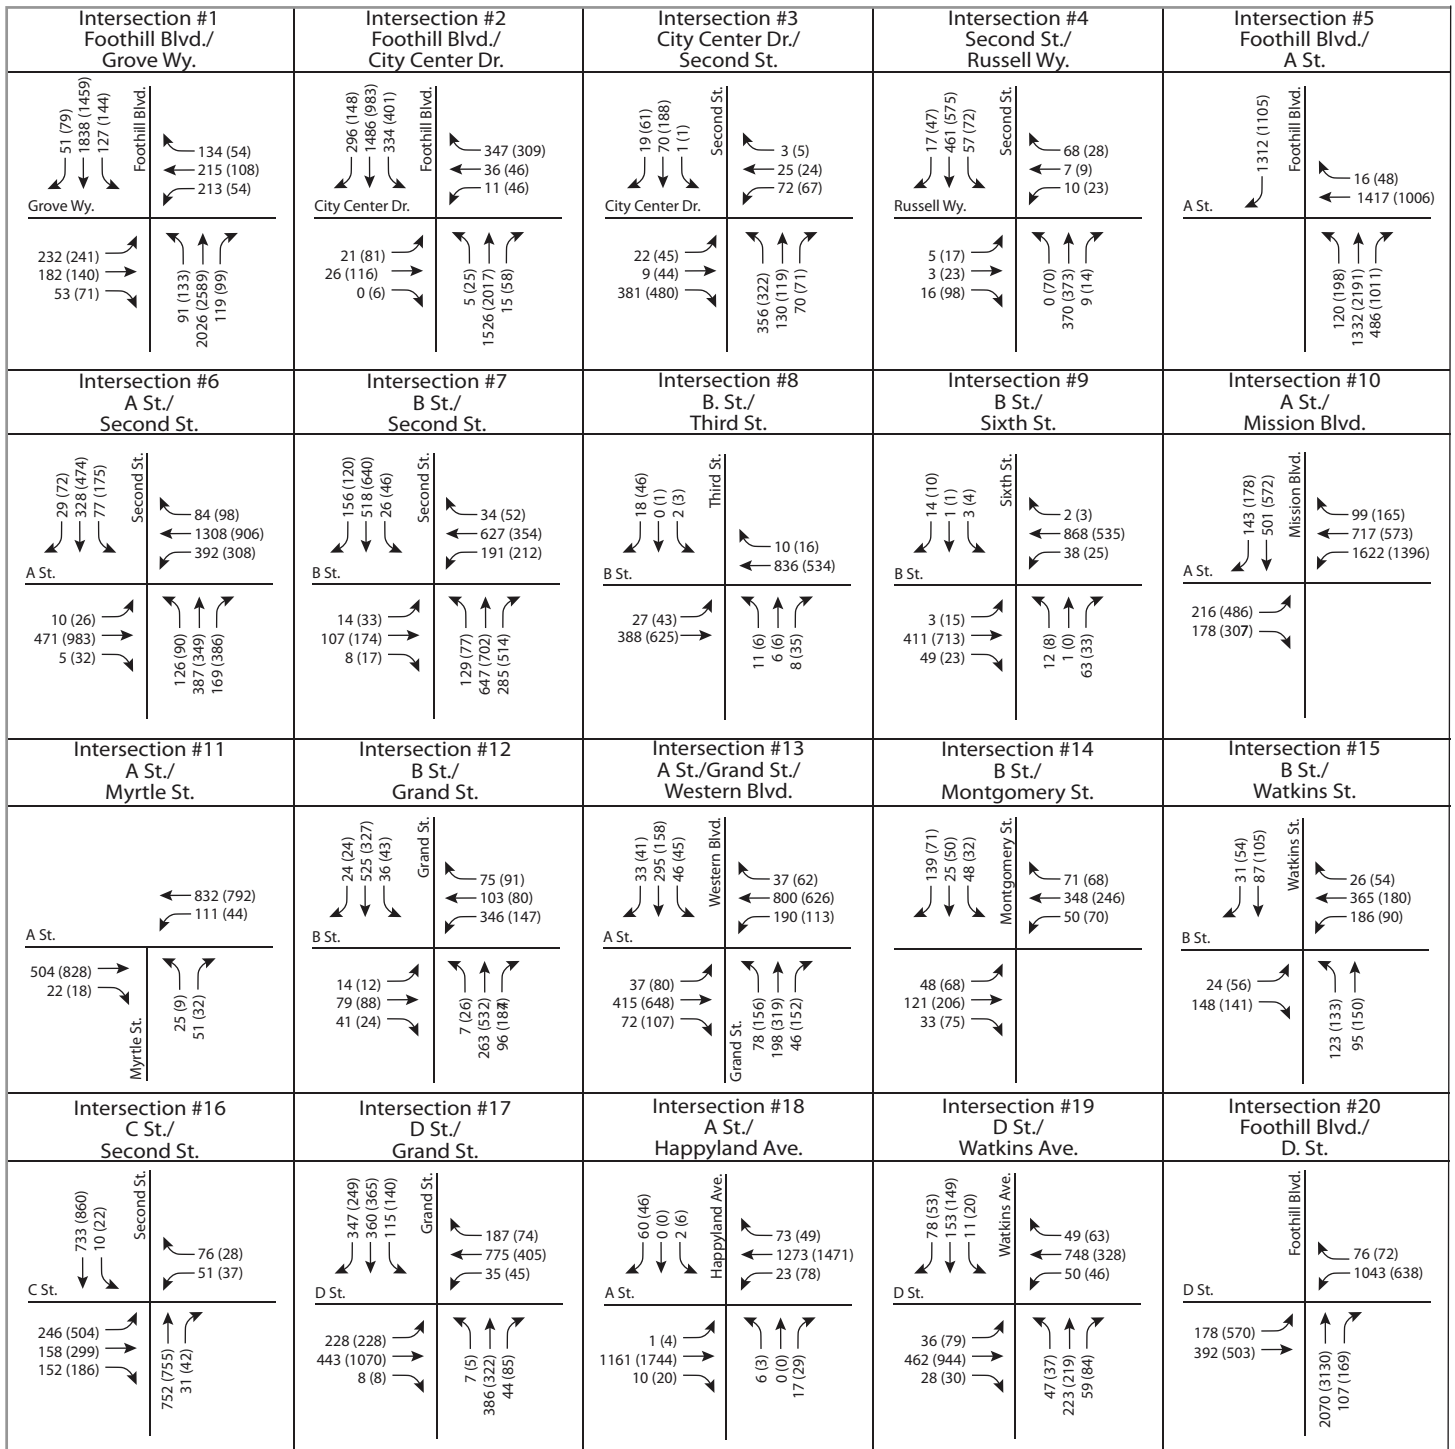

- Vehicle Extension Time – This is also known as the maximum gap. When a vehicle crosses a detector, it will extend the green time by the vehicle extension time.
- Minimum Gap Time – This is the minimum gap that the controller will use with volume-density operation.
- Phasing – The type of left-turn phasing (protected, split, permissive).
- Coordination Plans (Splits) – The maximum amount of time a phase can be served during the relevant peak period.
- Offsets – The offset value represents the number of seconds that the reference phase lags the master reference (or arbitrary reference if no master is specified). The master reference synchronizes the intersections sharing a common cycle length to provide a coordinated system.

The existing (2019) conditions intersection turning volumes are illustrated in **Figure 15, Figure 16, Figure 17, Figure 18** and **Figure 19**.

### ***Average Daily Traffic Counts***

TJKM collected the average daily traffic (ADT) counts for 15 study segments. The counts were provided by the City from previous projects and were collected in the years 2017 and 2018. The counts consist of 24-hour, bi-directional ADT conducted during typical weekday conditions. Segments with multi-day counts used a mid-week average calculated from counts conducted on Tuesday and Thursday. Segments with single-day counts consist of data conducted on either Tuesdays, Wednesdays, or Thursdays. To ensure typical weekday conditions were reflected, similar procedures as discussed above for the turning movement counts were applied when conducting ADT counts. **Appendix B** contains the 24-hour, bi-directional ADT counts for the study segments.

### Collision Data

The collision data was extracted from Statewide Integrated Traffic Records System (SWITRS) for a three-year period from 01/01/2016 to 12/31/2018. Collisions were observed at the study intersections within the study area.

Fatal collisions were found to occur at five locations within the three-year analysis period: Foothill Boulevard/City Center Drive (Intersection #2), Industrial Parkway/Stratford Road (Intersection #65), Hesperian Boulevard/A Street (Intersection #72), Hesperian Boulevard/Turner Court (Intersection #82), and Hesperian Boulevard/Eden Shores Boulevard-Tripaldi Way (Intersection #99). Each location experienced one fatal collision in either 2016 or 2017, and no fatal collisions were observed for the 2018 year. **Table 5** shows the types of collisions observed at the study intersections. The collision types are defined below.

**DEFINITIONS FOR COLLISION TYPES:** The types of collisions and their definitions as defined by CHP are listed below:

**HEAD-ON:** A head-on collision is a traffic collision where the front ends of two vehicles hit each other when traveling in opposite directions towards each other. For example, the front of one vehicle collides with the front of another, or prior to impact, one vehicle skids sideways, causing the side of the skidding vehicle to collide with the front of the

**SIDESWIPE:** A sideswipe collision is any collision between two vehicles in which the point of impact is on the side of both vehicles. For example, two vehicles are proceeding in the same direction or from opposite directions, and the side of one vehicle strikes the side of the other.

**REAR-END:** A rear-end collision occurs when the front bumper of a vehicle makes contact with another vehicle from the rear. For example, the front of one vehicle strikes the rear of another vehicle, or Vehicle #1 approaches Vehicle #2 from the rear and skids sideways during a braking action, causing the side of Vehicle #1 to strike the rear of

**BROADSIDE:** A broadside collision occurs when the side of one vehicle is struck by the front of another vehicle.

**HIT OBJECT:** A motor vehicle strikes a fixed object or other object.

**OVERTURNED:** A motor vehicle overturns and no prior collision or hitting an object caused the overturning. This would include a motorcyclist losing control, causing the vehicle to lie down on its side. Vehicles that collided with other vehicles or objects prior to overturning are considered as broadside, side swipe, etc. based on the travel direction of involved parties before the collision.

**AUTO/PED:** A vehicle strikes a pedestrian.

---

**OTHER:** A collision not covered in the preceding elements. This entry shall be explained in the narrative, such as a vehicle involved with – a bicycle, train, or animal; an automobile fire; passengers falling or jumping from a vehicle; a vehicle backing; a bicycle involved with a pedestrian or another bicycle, etc.

---

### Level of Service (LOS) Methodology

Level of Service (LOS) is a qualitative measure that describes operational conditions as they relate to the traffic stream and perceptions by motorists and passengers. The LOS generally describes these conditions in terms of such factors as speed, travel time, delays, freedom to maneuver, traffic interruptions, comfort, convenience, and safety. The operational LOS are given letter designations from A to F, with A representing the best operating conditions (free-flow) and F the worst (severely congested flow with high delays). Generally, intersections are the capacity-controlling locations with respect to traffic operations on arterial and collector streets. Under Existing Conditions, a standard of LOS D or better is considered as acceptable for all study intersections. Under Future Conditions, the study intersections are evaluated with Level of Service (LOS) E or better as acceptable for signalized intersections due to costs of mitigation and limited right-of-way as per the City of Hayward 2040 General Plan, and LOS D or better as acceptable for unsignalized intersections. The Alameda CTC Congestion Management Program (2017) identifies a worst case of LOS E as acceptable for CMP segments, except where the facility historically operates at LOS F or it is not feasible to improve operations. Non-CMP roadway segments are evaluated with LOS D or better as acceptable.

### ***Signalized Intersections***

The study intersections under traffic signal control were analyzed using the 2010 Highway Capacity Manual (2010 HCM) Operations Methodology for signalized intersections described in Chapter 18. This methodology determines LOS based on average control delay per vehicle for the overall intersection during peak hour intersection operating conditions. Control delay includes initial deceleration delay, queuing time, stopped delay, and final acceleration delay. The average control delay for signalized intersections was calculated using Synchro analysis software and was correlated to a LOS designation. **Table 6** presents the HCM 2010 delay and LOS definitions.

### ***Unsignalized Intersections***

The unsignalized study intersections were analyzed using the 2010 HCM Operations Methodology for Unsignalized intersections described in Chapters 19 and 20. LOS ratings for unsignalized intersections are based on the average control delay expressed in seconds per vehicle and is calculated for each movement, not for the intersection as a whole. For approaches composed of a single lane, the control delay is computed as the average of all movements in that lane. The weighted average delay for the entire intersections is presented for all-way stop controlled intersections. The average control delay for unsignalized intersections was calculated using Synchro analysis software and was correlated to a LOS designation. Major street traffic typically has no delay at two-way stop-controlled intersections and by definition have acceptable conditions; however, the major street left-turn movements and the minor street movements are all susceptible to delay of varying degrees. Generally, as major street volumes increase, the delay for the minor street increases. HCM 2010 definitions for delay and LOS at unsignalized intersections are presented in **Table 6**.

All intersection analyses were conducted using procedures and methodologies consistent with the 2010 HCM. These methodologies were applied using Synchro 10 traffic analysis software. At a few intersections, where the HCM 2010 methodology does not support lane configuration or

signal timing sequence, the HCM 2000 methodology was used instead. These intersections include Foothill Boulevard/A Street (Intersection #5), Foothill Boulevard/Mission Boulevard-Jackson Street (Intersection #25), Huntwood Boulevard/Sandoval Way (Intersection #69), Hesperian Boulevard/Sueirro Street (Intersection #74) and Industrial Boulevard/Tennyson Road (Intersection #87). HCM 2000 and HCM 2010 methodologies did not support the lane configuration at the intersection of Winton Avenue/Cabot Boulevard (Intersection #75) in Synchro 10, thus traffic conditions were evaluated using HCM 2000 procedures in Traffix analysis software. In Synchro software, HCM 2000 and HCM 2010 do not support intersections with two to three or more lanes.

The analysis methodology described above was used to measure a.m. and p.m. peak-hour traffic operations for the all study intersections.

**Table 6** describes the LOS thresholds for intersections under the HCM 2010 and HCM 2000 methodologies. The intersection LOS thresholds differ between signalized and unsignalized intersections. The LOS is determined by the average control delay on an intersection-wide basis for signalized and all-way stop-controlled intersections and on the movement with the highest delay for minor-street stop-controlled intersections.

**Table 6 : Level of Service Thresholds Based on Intersection Control Delay**

Level of Service	Description	Signalized Intersection Delay (D) (sec)	Unsignalized Intersection Delay (D) (sec)
A	Very low control delay, up to 10 seconds per vehicle. Progression is extremely favorable, and most vehicles arrive during the green phase. Many vehicles do not stop at all. Short cycle lengths may tend to contribute to low delay values.	$0 \leq A \leq 10$	$0 \leq A \leq 10$
B	Control delay greater than 10 and up to 20 seconds per vehicle. There is good progression, short cycle lengths or both. More vehicles stop causing higher levels of delay.	$10 < B \leq 20$	$10 < B \leq 15$
C	Control delay greater than 20 and up to 35 seconds per vehicle. Higher delays are caused by fair progression, longer cycle lengths or both. Individual cycle failures may begin to appear. Cycle failure occurs when a given green phase does not serve queued vehicles and overflow occurs. The number of vehicles stopping is significant, though many still pass through the intersection without stopping.	$20 < C \leq 35$	$15 < C \leq 25$
D	Control delay greater than 35 and up to 55 seconds per vehicle. The influence of congestions becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high volumes. Many vehicles stop and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.	$35 < D \leq 55$	$25 < D \leq 35$
E	Control delay greater than 55 and up to 80 seconds per vehicle, the limit of acceptable delay. High delays usually indicate poor progression, long cycle lengths, and high volumes. Individual cycle failures are frequent.	$55 < E \leq 80$	$35 < E \leq 50$
F	Control delay in excess of 80 seconds per vehicle. Unacceptable to most drivers. Oversaturation, arrival flow rates exceed the capacity of the intersection. Many individual cycle failures. Poor progression and long cycle lengths may also be contributing factors to higher delay.	$80 < F$	$50 < F$

**Roadway Segments**

Operations of the street segments were assessed based on volume-to-capacity (V/C) ratios. A per-lane capacity of 800 vehicles per hour was used for street segments, consistent with the Alameda CTC Congestion Management Program (2017). These capacities do not reflect additional capacity provided along segments through two-way left-turn lanes and at intersections through turn pockets. Roadway segments with a V/C ratio greater than 1.0 are assigned LOS F. Volume-to-capacity ratios and the corresponding levels of service are shown in **Table 7**.

**Table 7: Level of Service Thresholds Based on Segment Capacity**

Level of Service	V/C <sup>1</sup>
A	≤ 0.60
B	0.61 to 0.70
C	0.71 to 0.80
D	0.81 to 0.90
E	0.91 to 1.00
F	> 1.00

Notes:

<sup>1</sup>V/C = Volume-to-capacity ratio

### Synchro Model Development

Existing Conditions (2019) traffic operations were evaluated based on LOS criteria using Synchro 10, a software package for modeling and optimizing traffic systems. The analysis uses procedures documented under Chapter 18 (Signalized Intersections) and Chapters 19 and 20 (Unsignalized Intersections) of the HCM, 2010 Edition (unless in special circumstance as described above), published by the Transportation Research Board.

The Synchro model setup requires the input of geometric configurations, traffic flow, traffic control, and signal timings at the study intersections under Existing Conditions (2019). The operational models were developed for the a.m. and p.m. peak hours, based on data collected for this project.

### Existing Conditions Analysis Results

#### *Delay and LOS*

Existing intersection lane configurations, signal timings, and peak hour turning movement volumes were used to calculate the levels of service for the study intersections during each peak hour. The peak hour factors based on the counts were used at all study intersections for the existing condition analysis. Synchro 10 operations analysis software was used to complete the HCM 2010 and HCM 2000 LOS analysis procedures for all study intersections, except the intersection at Winton Avenue/Cabot Boulevard (Intersection #75) which was analyzed using HCM 2000 procedures in Traffix software.

Three different types of intersection controls exist among the 100 study intersections within the City of Hayward. Side street stop controlled intersections, which are present at 20 (nine one-way stop controlled intersections and 11 two-way stop controlled intersections) of the 100 study intersections, have no control on the major street and stop signs controlling the minor side street. Due to the inherent lack of delay on the street with no control (the vehicles on the uncontrolled streets are able to move freely through the intersection and therefore experience no delay), average vehicle delay is only measured for those movements that have stop control and yield conflicts with other movements rather than for the entire intersection. In this report, the average vehicle delay and level of service reported for one- and two-way stop controlled

intersections represent the approach with the highest delay to reflect the magnitude of the primary performance limitation of the intersection. Since no delay is experienced on the uncontrolled street (with the exception of yield requirements for left turning movements from the uncontrolled street), ensuring manageable delay on specific approaches represents the main consideration of side-street stop controlled intersection performance and is therefore the basis for LOS determination.

The second type of intersection control in the study sample is the all-way stop controlled intersection, which is present at 10 of the 100 study intersections. These intersections have stop signs for all approaches and all vehicles using the intersection experience delay. For this reason, average vehicle delay is reported for the entire intersection rather than specific movements or approaches to provide an indication of the overall performance of the intersection. For intersections with traffic control on all approaches, balancing the delay incurred on each of the various approaches to achieve the minimum average delay for the entire intersection is the fundamental premise for maximizing intersection performance and thus is the basis for identifying LOS.

The third type of control is a traffic signal, which is present at 70 of the 100 study intersections. While there are various types of phasing at the different signalized intersections, delay is experienced by vehicles on each of the approaches. Since optimizing the performance of a signalized intersection is generally predicated on minimizing the average delay to all vehicles using the intersection, LOS is based on the average vehicle delay for the entire intersection.

**Intersection Analysis Results**

**Table 8** summarizes the intersection operations under Existing Conditions (2019). Under this scenario, 47 study intersections (26 signalized and 21 unsignalized) operate at unacceptable LOS E or F during one or both peak periods. The remaining 53 study intersections operate at LOS D or better. Of the 21 unsignalized intersections with failing operations, 15 are one- or two-way stop controlled. At many of these intersections, the number of vehicles on the side streets are low, but are opposed by such heavy volumes on the major street that there are insufficient gaps for them to turn onto or cross the street, resulting in extensive delays on the side streets. In the overall context of intersection performance, the average vehicle delay is low due to the much greater number of vehicles able to pass freely through the intersection without delay, although the fewer vehicles using the side streets experience poor levels of service. This scenario occurs at most of the unsignalized study intersections along Hesperian Boulevard, Tennyson Road, 2<sup>nd</sup> Street, A Street, Santa Clara Street, and D Street.

Notes:

<sup>1</sup>Delay: Average control delay in seconds per vehicle, reported values are overall for signalized and all-way-stop-control intersections; and critical minor approaches for two-way-stop-control intersections.

<sup>2</sup>LOS: Level of Service.

\* 2000 HCM Methodology is used.

\*\* Intersection LOS evaluated in Traffix software.

**Bold** text indicates unacceptable intersection operations.

**Appendix C** contains the existing conditions LOS analysis reports from Synchro 10 software. The a.m. and p.m. peak hour intersection LOS within the three study zones shown in **Figure 20**, **Figure 21**, and **Figure 22**, respectively.

### Roadway Segment Analysis Results

**Table 9** summarizes the results of the LOS analysis for both directions along roadway segments during a.m. and p.m. peak hours. Under Existing Conditions, all study segments operate at LOS E or better both peak hours, except the following two segments:

- Southbound direction of Foothill Boulevard south of City Center Drive during the a.m. peak hour (Segment #4)
- Both directions of Winton Avenue between Interstate 880 and Santa Clara Street (Segment #11)

**Table 9: Roadway Segment Level of Service Analysis – Existing Conditions**

**Collision Analysis Results**

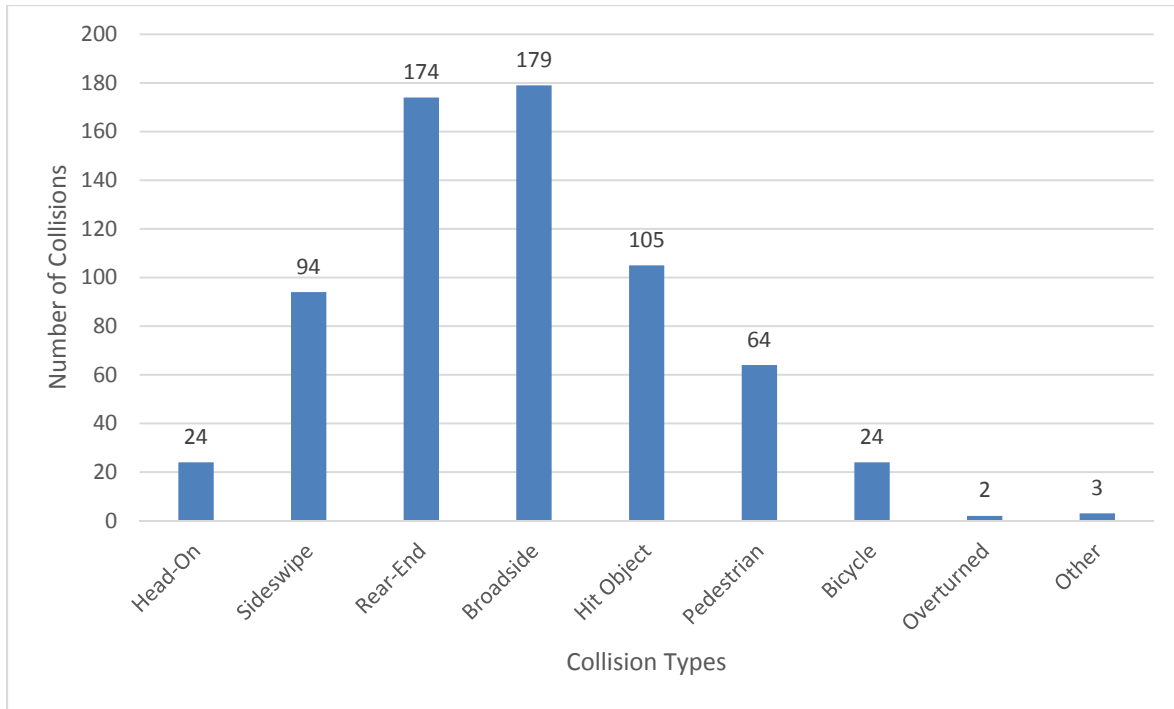

This section summarizes the collision analysis by severity and by type. The collision severity result is shown in **Figure 23**. Fatal accidents are approximately one percent and injury accidents are approximately 52 percent of all collisions.

**Figure 23: Collision Severity**

The collision type result is shown in **Figure 24**. Broadside collisions have the highest rate (27 percent) followed by the rear-end collisions (26 percent). Both broadside and rear-end collisions are typical for intersection collisions, especially at signalized intersections. Detailed collision data is provided in **Appendix D**.

Figure 24: Collision Types

**Signal Warrant Analysis**

Unsignalized intersections were evaluated using the Peak Hour Volume Warrant (i.e., Warrant 3) from the Manual on Uniform Traffic Control Devices (MUTCD). Unsignalized intersections shown to trigger the peak hour signal warrant are considered deficient in this analysis. However, the decision to install a traffic signal should not be based solely upon a single warrant. Other factors, such as delay, congestion, driver confusion, future land use or other evidence for right-of-way assignment, should also be considered.

Warrant 3 assesses peak hour traffic volume for the need for a traffic signal. Traffic signals tend to reduce the potential for right-angle type (broadside) collisions, but also tend to increase the potential for less severe, rear-end collisions. Signal warrant peak hour volumes represent the threshold point at which the potential for more rear-end collisions is offset by the potential for fewer more severe right-angle collisions. Data needed to perform these warrant analyses include peak hour traffic counts collected as part of this study, number of travel lanes and area characteristics.

Signal warrant analysis was conducted for 17 unsignalized study intersections with unacceptable LOS F under existing conditions. **Table 10** summarizes the results of the peak hour signal warrant at intersections with unacceptable LOS. Seven of the evaluated unsignalized intersections meet the peak hour signal warrant for one or both peak hours. Peak Hour Signal Warrant Analysis worksheets are provided in **Appendix E**.

**Table 10 : Existing Conditions Intersection Signal Warrant Summary**

#	Intersection	Control	Existing Conditions

Notes:

<sup>1</sup>AM – morning peak hour, PM – evening peak hour

N/A – Intersection level of Service D or better for respective peak hour.

**Bold** – Peak hour signal warrant is met.

### Existing Conditions Mitigations

Under Existing Conditions, 47 study intersections operate at unacceptable LOS E or F during one or both peak periods. These intersections, listed below, were evaluated for mitigations to improve intersection operations. **Appendix F** contains the existing conditions mitigations LOS analysis reports from Synchro 10 software. **Table 11** details the mitigations and associated LOS scores at the following intersections:

- Foothill Boulevard/City Center Drive (Signalized)
- City Center Drive/2<sup>nd</sup> Street (Signalized)

Notes:

<sup>1</sup>AM – Morning peak period; PM – Evening peak period.

<sup>2</sup>Worst movement delay during respective peak hour.

<sup>3</sup>Delay: Average control delay in seconds per vehicle, reported values are overall for signalized and all-way-stop-control intersections; and critical minor approaches for two-way-stop-control intersections.

<sup>4</sup>LOS – Level of Service.

**Bold** indicates failing level of service.

*Text* – Peak hour not failing under existing conditions, but mitigations applied to this peak.

### Summary

Under Existing Conditions, the traffic operation and traffic safety within the study area are summarized below:

- 1 percent of the collisions are fatal collisions.
- 52 percent of the collisions are injury collisions.
- Broadside & rear-end are the main types of traffic collisions at the study intersections.
- 26 out of 70 signalized intersections operate at LOS E or F under Existing Conditions.
- 21 out of 30 unsignalized intersections operate at LOS E or F under Existing Conditions.
- Two out of 15 study segments operate at unacceptable conditions during at least one peak period. Both failing segments are CMP roadways.
- Seven out of 21 failing, unsignalized intersections meet the peak hour signal warrant for one or both peaks.
- 33 out of 47 failing intersections improve from unacceptable to acceptable operations during one or both peak hours when mitigations are applied.

## **CHAPTER 3. DEVELOPING TRAFFIC FORECAST AND FUTURE CONDITIONS ANALYSIS**

This section of the report provides a summary of travel demand forecasting methods and results for the Hayward Citywide Multimodal Improvement Study. This chapter includes the following sections:

- City of Hayward General Plan Transportation Model Description
- Model Validation
- 2040 Forecasts of Study Intersections and Segments

### **City of Hayward General Plan Transportation Model**

The Hayward City Transportation model is based on the Alameda County Transportation Commission Model. 2005 is the model base year and 2035 is the model future year.

The Hayward model has recently been updated with the following key changes:

- Update Base Year from 2000 to 2005 and extend the Future Year to 2035
- Update Traffic Analysis Zones (TAZ)
- Update 2035 Future Year with Hayward general plan improvements
- Update Networks to be consistent with the Plan Bay Area
- Improve Model Sensitivity to Bicycle and Pedestrian modes

The latest Hayward model was obtained as the travel demand-forecasting tool for this project. The Hayward model can forecast traffic in a.m. /p.m. 4-hour peak periods and a.m. /p.m. peak hour conditions.

### **Model Validation**

The Hayward Model was based on the Alameda County Transportation Commission 2010 model. TJKM collected turning movement counts (TMC) for the morning and evening peak periods for 70 study intersections throughout the year 2016, and received TMC for 30 study intersections from the City for the years 2014 and 2015, both of which were projected to the year 2019 for Existing Conditions. The Hayward Model was modified slightly to add missing roadways and correct errors in speeds and capacity. Peaking factors were also slightly modified to increase trips in the study area to improve assignment validation. This was done separately for AM and PM peak hours in the base year model.

For the future year model, Hayward General Plan improvements were coded into the land use data used for forecasting future traffic volumes. The future model volumes are then compared to the base year to get a growth rate, which was then applied to the count data for forecasting purposes.

### **2040 Forecasts of Study Intersections and Segments**

The Hayward model network was used to generate forecasts of the turning volumes at the study intersections and study segments for the base and future years. Based on the review of the

travel demand model output, manual adjustments were made to the model-generated forecast to replicate some of the existing conditions. Turning movements were generated directly from the highway assignment module of the CUBE model.

The 2040 demands were generated by applying the NCHRP 255 delta method. The growth between 2018 and 2040 was estimated by taking the delta or difference between two model forecasts. In the few locations where the 2018-to-2040 growth was negative, the growth was assumed to be zero. In other words, the existing volumes will be used if negative growth is forecasted. The processed growth was then added to the 2018 counts to produce 2040 demands.

2040 demands will be used as inputs to subsequent traffic analyses of the study intersections and study segments. Turning movement forecasts are summarized in **Table 12**, and study segment forecasts are summarized in **Table 13**. Travel demand model is a regional model and it cannot cover all local intersections. Turning movement volumes show zero values for the entire intersections in **Table 12** because intersection nodes were not included in the travel demand model.

**2040 Study Intersections Analysis Results**

Future intersection lane configurations, peak hour turning movement volumes, and optimized signal timings were used to calculate the levels of service for the study intersections during each peak hour. The peak hour factors are based on the peak hour counts generated from the Travel Demand Model (TDM) and the lane configurations reflect changes proposed and approved in the Hayward 2040 General Plan (2014). Planned segment improvements, such as one-way or two-way conversions, transit lanes, lane removals, etc. are not considered in this analysis. Synchro 10 operations analysis software was used to complete the HCM 2010 and HCM 2000 level of service (LOS) analysis procedures for all study intersections. As per the 2040 General Plan, the City of Hayward has minimum LOS standards of LOS E at signalized intersections during the peak commute periods, except where there are high costs of mitigation or other unacceptable impacts which LOS F is acceptable.

**Table 14** summarizes the study intersection operations under Future Conditions (2040). Under this scenario, 47 intersections (24 signalized, 23 unsignalized) operate at unacceptable LOS during the a.m. peak, and 48 intersections (27 signalized, 21 unsignalized) operate at unacceptable LOS during the p.m. peak. The remaining intersections operate at acceptable LOS. **Appendix G** contains the future conditions LOS analysis reports from Synchro 10 and Traffix software. The a.m. and p.m. peak hour intersection LOS within the three study zones area shown in **Figure 25, Figure 26, and Figure 27**, respectively.

Notes:

<sup>1</sup>Delay: Average control delay in seconds per vehicle; reported values are overall for signalized and all-way stop-control intersections, and critical minor approaches for two-way stop-control intersections.

<sup>2</sup>LOS: Level of Service

**Bold** indicates unacceptable intersection operations.

**2040 Roadway Segment Analysis Results**

**Table 15** summarizes the results of the LOS analysis for both directions along roadway segments during a.m. and p.m. peak hours. Under Future Conditions, nine study segments operate at unacceptable LOS E or F during at least one peak period, in one or both directions. The remaining six segments operate at acceptable LOS D or better in both directions, during both a.m. and p.m. peaks.

Notes:

<sup>1</sup>Number of Lanes per direction; Does not include TWLTL medians or turn pockets at intersections.

<sup>2</sup>Capacity = 800 vehicles per hour per lane.

<sup>3</sup>V/C: Volume-to-capacity ratio; Calculated using peak hour Average Daily Traffic (ADT) counts generated from TDM.

<sup>4</sup>LOS: Level of Service.

\*Indicates Alameda CTC Congestion Management Program (CMP) roadway with minimum standards of LOS E or better.

**Bold** indicates unacceptable roadway segment operations.

Based on the analysis results, TJKM provides mitigations to improve intersection operations and roadway segment operations for pedestrians, bicyclists and vehicles. TJKM also considered improvements proposed in the General Plan, Bicycle and Pedestrian Master Plan, and Downtown Specific Plan for the City of Hayward. The above-mentioned mitigations and proposed improvements are summarized in Section 5 of this report.

## CHAPTER 4. DOCUMENT REVIEW

A comprehensive review of prior planning decisions and technical studies is essential to acquire a full understanding of City polices and a study area's existing conditions, to explore opportunities of incorporating City and County planning goals and objectives, and to ensure alternatives are developed consistent with local and regional policies, standards and guidelines. The documents that have been reviewed for the City of Hayward include local plans, regional transportation plans, and regional active transportation plans. In addition, this review focuses on the City's planned multimodal improvements for this Citywide Multimodal Study to build upon and identify any gaps that need to be addressed. Some plans have specific planned projects listed while others have vision, goals and objectives. Detailed policies, programs, and projects are summarized in **Table 16**.

### Hayward Bicycle and Pedestrian Master Plan Update

The City of Hayward has developed the Bicycle and Pedestrian Master Plan to update and replace the 2007 Bicycle Master Plan. The updated plan is used by the City and other relevant agencies to guide, prioritize and implement a comprehensive network of bicycle and pedestrian facilities. The plan guides the City in providing a safe, comfortable, convenient and connected transportation network for people of all ages and abilities, and is supported by programs and policies promoting complete communities and sustainable transportation. The goals of the Plan include increasing safety for cyclists and pedestrians travelling in the City of Hayward, providing complete streets, providing a connected network and continuous system of active transportation facilities that accommodate daily needs of people of all ages and abilities, and obtaining and maintaining funding for implementation

and maintenance of said facilities.

The Existing Conditions Report of the Master Plan analyzed bicycle Level of Traffic Stress (LTS), pedestrian- and bicycle-related collisions and high injury corridors within the City of Hayward. Findings of the report include the following:

- 3.4% of Hayward residents bike and walk to work with a majority being low-income residents and young families/professionals
- The majority of trips in Hayward are internal, allowing for potential growth in active transportation use
- The majority of arterial streets in the City are high-stress segments for bicyclists
- Arterial roadways with posted speeds of 35 miles per hour or higher pose an increased risk for pedestrians and bicyclists

The Plan recommends improvements to the City's bicycle and pedestrian networks, transit infrastructure and priority intersections. Recommendations include separated bikeways, trail network expansions and neighborhood bikeways along the bicycle network; ADA curb ramps, high-visibility crosswalks, midblock rectangular rapid flashing beacons (RRFBs), curb extensions, signal improvements and midblock pedestrian hybrid beacons along the pedestrian network; and shared Class II bike lane and bus stop lane and floating bus boarding islands along priority transit corridors.

The following intersections are identified as priority intersections because they exhibit higher pedestrian collision rates than observed in the rest of the network:

- West Tennyson Road and Huntwood Avenue
- Jackson Street and Silva Avenue/Meek Avenue
- Whipple Road and Dyer Street
- Foothill Boulevard and City Center Drive

### City of Hayward Downtown Specific Plan and Code (2019)

The City of Hayward Downtown Specific Plan (DTSP) and Code serves as a strategy to reach the community's vision for a safe and historical-rich downtown area that provides vibrant multimodal networks and acts as a destination for residents and visitors. The DTSP encompasses a Plan Area generally bounded by Grand Street to the west, E Street to the south, 3<sup>rd</sup> Street to the east, and Hazel Avenue to the north; and discusses short- and long-term goals, mobility improvements, infrastructure standards, and development codes. Chapter 6, the Development Code section of the Plan, details Downtown zone classifications, zone standards, and permits and procedures required for different development projects. The Code details zoning standards and procedures for implementation of the DTSP. Its purpose is to protect the community's safety, welfare, and culture from adverse effects

of land use changes, new developments, and modifications to existing developments. The Code applies to the following zones in the Plan Area, listed from least urban to most urban: Neighborhood Edge (NE), Neighborhood General (NG), Urban Neighborhood (UN), Downtown Main Street (DT-MS), and Urban Center (UC). The Code identifies standards for setbacks, driveways, building height, footprint, etc. for developments in each zone. Developments such as Central-City residential, Central-City commercial, planned development and open space are exempt from the Code and subject to standards in the Hayward Municipal Code.

The plan identifies short term, midterm, long term and final vision buildout improvements ranging five, five to ten, 11-15 and 15-20 years, respectively. These improvements are detailed in **Table 16** at the end of this document. Aside from major roadway improvements, the plan also proposes intersection, pedestrian, bicycle, greening, median and open space improvements.

Proposed improvements include bulbouts and high-intensity activated crosswalks (HAWK) at intersections; parklets, lighting and benches along the pedestrian network; and sidewalk bike racks and bike corrals for bicycle parking. Additional proposed improvements include implementing tree wells and planting strips for greening along Foothill Boulevard; reconstructing the median island at the Foothill Boulevard/Mission Boulevard/D Street intersection; and programming of open space such as plazas and event space.

### City of Hayward 2040 General Plan Update and General Plan EIR (2014)

Adopted in 2014, the City of Hayward 2040 General Plan consists of a Background Report, detailing 2012 demographic, land use, economic, etc. conditions, and a Policy Document, consisting of principles, policies, and goals to be considered in decision-making processes for the City. The General Plan consists of eight guiding principles which prioritize the enhancement of youth programs, safety and cleanliness of neighborhoods, technological infrastructure, business opportunities, Downtown streetscape and destinations, community character and college relations, alternative transportation facilities, and environmental habitats and resources. This document sets 12 mobility goals that aim to improve local multimodal systems, regional transportation connections, development of complete streets, local traffic circulation and operations, pedestrian

facilities, bicycle networks, coordination with and between public transit agencies, automobile traffic congestion, parking demand/supply, airport operations, safety and efficiency of goods movement, and transportation funding.

Two amendments to the Hayward 2040 General Plan establish Vehicle Miles Traveled (VMT) as a California Environmental Quality Act (CEQA) threshold for transportation impact analysis, consistent with Senate Bill 743 (SB 743), and new Greenhouse Gas (GHG) emission reduction goals. The amendments conform with the adopted SB 743 legislation, which changes the focus of transportation impact analysis in CEQA from measuring impacts to drivers to measuring the impact of driving. VMT measures the total amount of driving over a given area, and connects the environmental impacts of driving from transportation to State greenhouse gas emissions reduction goals. As per the General Plan Amendments, the City will “adopt new VMT thresholds to reduce VMT Per Capita and VMT Per Employee and consider the adoption of local Level of Service guidelines to support the expansion of a multimodal network for projects that increase transit ridership, biking and walking”. Additionally, the City will work to reduce community based and municipal GHG emissions to the following:

- 20% below 2005 baseline levels by 2020
- 30% below 2005 baseline levels by 2025
- 55% below 2005 baseline levels by 2030

Additionally, the City and community will develop a plan that aims to reduce community based GHG emissions to achieve carbon neutrality by 2045.

### City of Hayward Adopted Capital Improvement Program (FY 2020-29)

The Hayward Capital Improvement Program (CIP) for the fiscal years of 2020-2029 was adopted in May 2019. The Hayward CIP is a planning document which supports the City Council's priorities of Safe, Clean, Green, and Thrive and includes revenue and expenditure estimates for proposed and planned public infrastructure projects. This document includes 255 projects, and estimates a \$147.83 million budget and \$410.40 million of unfunded capital needs. Funded projects are supported by several funding sources including state and federal grants, government and internal service funds, Measure C, Gas Tax, Measure B and enterprise and utility profits. The document organizes CIP improvements based on the City Council priority they align with. CIP improvement projects are as follows:

- Safety: New Fires Station No. 6 and Fire Training Center; Water systems improvements
- Clean: Sewer Collection System pipeline improvements; Water Pollution Control Facility improvements
- Green: Recycled Water project; Groundwater Sustainability Plan; Solar Energy installations; Fleet Management Program
- Thrive: Street and Roadway improvements; Municipal Lot 7, D-1 and D-2 improvements; Sidewalk installments and improvements; 21st Century Library and Community Learning Center and Heritage Plaza Arboretum; Downtown Specific Plan Implementation Project; Hayward Boulevard Traffic Calming Project; Hayward Executive Airport improvements; Information Technology replacements; La Vista Park project; Tennyson Road Complete Streets Feasibility Study; South Hayward Youth and Family Center

**Table 16** details the capital budget for the major projects listed above.

### Alameda CTC Deficiency Plan Guidelines (2017)

The Deficiency Plan Guidelines were developed as part of the Alameda County Transportation Commission (CTC) Congestion Management Program (2017). This plan guides jurisdictions in efforts to remain in compliance with the CTC's Congestion Management Program (CMP) and provides methods to improve conditions for roadways that do not meet CMP standards. The guidelines establish roadway capacity standards, deficiency plan standards and requirements, and acceptable implementation actions. The Alameda CTC identifies deficient roadways through LOS monitoring of roadway segments under p.m. peak conditions. If a roadway does not meet LOS standards after applying required exemptions, it is identified as deficient and the relative jurisdiction must prepare a deficiency plan to improve the roadway conditions.

The following types of travel are exempt from deficiency identification:

- Interregional travel
- Construction, rehabilitation or maintenance of facilities that impact the transportation system
- Freeway ramp metering
- Traffic signal coordination by state or local agency
- Traffic generated by the provision of low to very low income housing
- Traffic generated by high-density residential development within one-fourth mile of a fixed rail passenger station; and
- Traffic generated by any mixed-use development located within one-fourth mile of a fixed rail passenger station; and if more than half of the land area or floor area of the mixed use development is used for high density residential housing.

Deficiency plans are evaluated based on the following criteria:

- Completeness of requirements defined in California Government Code Section 65089.5,
- Suitability of the Deficiency Plan actions in relation to the level of deficiency present,
- Dependability of plan funds,
- Capacity of implementation (actions can be implemented with relative ease), and
- Practicality of implementation schedule.

### Climate Action Plan (2014)

The City of Hayward Climate Action Plan was developed in 2009 and later adopted into the City's 2040 General Plan in 2014. The Climate Action Plan consists of policies and programs

which aim to achieve greenhouse gas reductions from 2005 baseline levels of 20 percent by year 2020, 62.7 percent by year 2040, and 82.5 percent by year 2050. This plan also includes a timeline of implementation programs to guide efforts from 2014-2040, shown in **Table 16**. Some programs highlighted in the plan include water conservation programs, environmental education programs, and City employee car and bike share programs. Transportation-related policies of the Plan include support of high-density transit-oriented development, encouragement of bicycling, walking and transit amenities, consideration of pedestrian needs, development of a continuous pedestrian system, collaboration with BART and AC Transit for service expansions, support of programs that increase vehicle occupancy, etc.

## **CHAPTER 5. MULTIMODAL IMPROVEMENT PROJECTS AND ACTION PLAN**

This Chapter of the report presents the proposed multimodal improvement projects and cost estimates under Existing and Future Conditions. The proposed mitigations were developed based on previous transportation plans in the City of Hayward, along with mitigations prepared as part of this study. Referenced plans include the City of Hayward Bicycle and Pedestrian Master Plan, the 2040 General Plan and the Downtown Specific Plan, and additional information provided by the City of Hayward staff. The proposed improvements and cost estimates were approved by the City of Hayward staff. The cost estimates provided in this Chapter are used to estimate the Nexus fee, presented in following sections of this report. This Chapter also details a preliminary action plan for implementation of the proposed improvement projects.

### **Improvement Projects Methodology**

#### ***Mitigation Methodology***

TJKM developed mitigations for the study intersections based on the synchro analysis for Existing and Future Conditions and considering proposed improvements from the Hayward Downtown Specific Plan (2019) and the Hayward Bicycle and Pedestrian Master Plan (2020). This study does not consider the mitigations in the General Plan which were labelled as infeasible or any mitigations that conflict with existing infrastructure. The City provided near-term and mid-term pedestrian, bicycle and vehicle improvements proposed on E. 14<sup>th</sup> Street/Mission Boulevard and Fremont Boulevard by the Alameda County Transportation Commission (ACTC) to be included in the cost estimate calculations. The study considers improvements from all three plans and the near-term/mid-term improvements, except where the proposed improvements conflict with each other, in which the Bicycle and Pedestrian Master Plan improvements were prioritized, or they are already completed. Additionally, TJKM developed mitigations at the study intersections based on the level of service (LOS) results of the intersection analyses under Existing and Future (2040) conditions. These mitigations are only proposed at intersections and do not make changes to roadway segments in order to avoid conflict with the adopted City of Hayward plans.

#### ***Cost Estimate Methodology***

Cost estimates for the bicycle and pedestrian improvements were developed via pre-calculated project costs provided in Appendix A of the Bicycle and Pedestrian Master Plan, and unit costs for bicycle and pedestrian facilities in Appendix F of the Bicycle and Pedestrian Master Plan. The Plan provides low-cost and high-cost scenarios which are also considered in this study. Cost estimates for the vehicle improvements were developed via typical unit costs for roadway and intersection facilities. The City provided unit costs for some pedestrian crossing treatments along with preliminary cost estimates from the Main Street Complete Streets Project, which were used to calculate costs for proposed pedestrian improvements. The cost estimates were separated into the following categories: bicycle projects, pedestrian projects, transit projects and vehicle projects. The bicycle, pedestrian and transit project lists provide low- and high-cost estimates, and the vehicle projects provide existing and future mitigations cost estimates. The vehicle cost estimates are calculated for existing and future mitigations proposed to improve LOS under the Existing and Future (2040) Conditions analyses performed as part of the Hayward Citywide Multimodal Improvement Study.

### ***Action Plan Methodology***

The projects are categorized into short-term, near-term and long-term projects based on the Bicycle and Pedestrian Master Plan and information provided by the City. The Bicycle and Pedestrian Master Plan prioritizes projects based on implementation timelines and available funding sources. Projects that close gaps in existing transportation networks and provide direct access to transit and schools are categorized as near-term and should be implemented within the next five years. Projects that improve large arterial facilities are categorized as long-term and should be implemented five to ten years after adoption. The Bicycle and Pedestrian Master Plan provides funding sources for each project, however, this study only considers funding expected to be received based on funding received by the City for the past five years. The potential funding sources should be updated as the City receives more or less funding in the future.

### **Multimodal Improvement Projects**

The proposed mitigations and their respective costs are categorized into tables for bicycle, pedestrian and vehicle projects. **Table 17** summarizes the total costs calculated for the projects in the City of Hayward.

#### ***Bicycle Projects***

The bicycle projects improve access and safety of bicyclists in the City of Hayward transportation network. The goals of these projects are to improve bicycle safety, eliminate obstructions to bicycle travel, and encourage bicycle transportation. Bicycle projects include gap closures, facility-type enhancements, and connectivity to other transportation facilities. The bicycle projects conform to the existing transportation network and avoid conflicts with pedestrian, transit and vehicle projects and approved plans in the City of Hayward. The projects are from the Bicycle and Pedestrian Master Plan, Downtown Specific Plan, 2040 General Plan, and Mid-term and Near-term improvements summary provided by the City of Hayward. Additionally, the City of Hayward and TJKM replaced some projects from the plans with improvements that fit within the existing and future planned transportation network. Separate bicycle facilities are assumed as Class II bike lanes at intersection approaches, especially at intersections where addition of turn lanes are proposed. **Table 18** lists the bicycle network improvement projects along with their costs and action plan categorizations at the end of this Chapter.

#### ***Pedestrian Projects***

The pedestrian projects improve access and safety of pedestrians in the City of Hayward transportation network with a focus near transit stops and schools. The goal of these projects is to encourage walking, lowering vehicle speeds and improving connection to transit centers. Pedestrian projects include road diets, sidewalk and crossing enhancements, trail improvements, and ADA accessibility enhancements. The pedestrian projects conform to the existing roadway network and avoid conflicts with bicycle, transit and vehicle projects and approved plans in the City of Hayward. The projects are from the Bicycle and Pedestrian Master Plan, Downtown Specific Plan, and Mid-term and Near-term improvements summary provided by the City of Hayward. Additionally, the City of Hayward and TJKM replaced some projects from the plans with improvements that fit within the existing and future planned transportation network. **Table 19** lists the pedestrian network improvement projects along with their costs and action plan categorizations at the end of this Chapter.

**Transit Projects**

The transit projects improve accessibility under Existing and Future Conditions. Additionally, improving transit amenities encourages transit usage and thus may reduce vehicular traffic at intersections and roadways. Transit projects include improvement and addition of bus stops and increased frequency of bus stops. Additional costs consist of roadway changes to accommodate the transit improvements, such as travel lane, parking lane, and median reductions and removals. The projects are from the Bicycle and Pedestrian Master Plan. Additionally, the City of Hayward and TJKM replaced some projects from the plans with improvements that fit within the existing and future planned transportation network. **Table 20** lists the transit improvement projects along with their costs and action plan categorizations at the end of this Chapter.

**Vehicle Projects**

The vehicle projects improve intersection and roadway operations under Existing and Future Conditions. Vehicle projects include addition of turn lanes at intersections, signal timing improvements, controller improvements, and signalization of stop-controlled intersections. Roadway segment widening projects are not recommended in this study. The vehicle projects conform to the existing transportation network and avoid conflicts with bicycle, pedestrian and transit projects and approved plans in the City of Hayward. The vehicle projects were developed by TJKM based on results from the intersection level of service performed for Existing and Future Conditions and approved by the City, and projects from the 2040 General Plan and the Mid-term and Near-term improvements summary provided by the City of Hayward. **Table 21** lists the vehicle projects along with their costs and action plan categorizations at the end of this Chapter.

**Cost Estimate Calculations**

**Table 17** summarizes the total costs calculated for the projects in the City of Hayward. Detailed cost estimate tables for bicycle, pedestrian, transit and vehicle projects are included on the following pages.

**Table 17: Total Cost Estimates**

Project Category	Low Cost	High Cost	Existing Cost	Future Cost
Bicycle	\$7.3 million	\$18.4 million	-	-
Pedestrian	\$108.3 million	\$124 million	-	-
Transit	\$1.9 million	\$14.9 million		
Vehicle	-	-	\$5.2 million	\$25.1 million

**Action Plan**

The Action Plan categorizes each project into short-term, near-term and long-term projects. Implementation of the improvement projects are consistent with the Bicycle and Pedestrian Master Plan and are as follows:

- Short-Term: Implement immediately
- Near-Term: Implement within the next 5 years

- Long-Term: Implement 5-10 years after Plan approval.

The bicycle, pedestrian and transit improvement projects are categorized based on the Bicycle and Pedestrian Master Plan and information provided by the City. The vehicle projects are separated into Existing Conditions improvements and Future Conditions improvements. The improvements under Existing Conditions are considered near-term projects, and improvements under Future Conditions are considered long-term projects in the Action Plan.

The proposed projects, costs and action plan categories are summarized in the following tables.

Table 18: Bicycle Improvement Projects

Project	Corridor	Extents	Proposed Facility	Unit Cost	per Unit	Area	Total Cost	Total Cost (High Cost of Range)	Action Plan
159A	Watkins Street	Fletcher Lane to Jackson Street	Class II Buffered Bicycle Lane				\$ 9,512.00		Near Term
159B	Watkins Street	Jackson Street to B Street	Class II Bicycle Lane				\$ 15,100.00		Near Term

	Foothill Boulevard/Mission Boulevard & Jackson Street	Signal timing improvements.	signal timing	\$4500/Intersection	\$ 4,500.00	Signal timing improvements.	signal timing	\$4500/Intersection	\$ 4,500.00	Near-Term
2nd Street	2nd Street/City Center Drive	Add EBR overlap with NB phase.	-	-	-	Add EBR overlap with NB phase.	1 new signal head "No U-Turn" sign	\$5000/signal head	\$ 5,000.00	Near-Term
	2nd Street/Russell Way	Add westbound left turn pocket with 70 ft storage & 50 ft taper length by adding red zone along curb for 70 feet; Convert westbound shared left-through-right lane into through-right lane; Convert eastbound through-left lane into exclusive left turn pocket with 70 ft storage & 50 ft taper length; Convert eastbound right turn lane into shared through-right lane.	Lane restriping @ WB & EB approaches	\$0.50/LF Remove striping \$51.50/LF new striping	\$ 288.00	Add westbound left turn pocket with 70 ft storage & 50 ft taper length by adding red zone along curb for 70 feet; Convert westbound shared left-through-right lane into through-right lane; Convert eastbound through-left lane into exclusive left turn pocket with 70 ft storage & 50 ft taper length; Convert eastbound right turn lane into shared through-right lane. Convert intersection control to AWSC.	Lane restriping @ WB & EB approaches Red curb paint @ WB approach Add stop signs @ 2nd St approaches	\$0.50/LF Remove striping \$51.50/LF new striping \$5/LF Red Curb \$550/new stop sign \$27LF stop bar	\$ 6,384.00	Near-Term
	2nd Street/A Street	-	-	-	-	Signal timing improvements.	signal timing	\$4500/Intersection	\$ 4,500.00	Near-Term
	2nd Street/B Street	-	-	-	-	Signal timing improvements.	signal timing	\$4500/Intersection	\$ 4,500.00	Near-Term
	2nd Street/C Street	-	-	-	-	Signal timing improvements.	signal timing	\$4500/Intersection	\$ 4,500.00	Near-Term
B Street	2nd Street/D street	Add southbound right turn pocket with 50 ft storage & 25 ft taper length; Convert southbound shared through-right lane into exclusive through lane; Move bus stop in southbound direction to south of intersection.	Lane restriping @ SB approach	\$1.50/LF new striping \$500/new pavement marking	\$ 7,005.00	Add southbound right turn pocket with 50 ft storage & 25 ft taper length; Convert southbound shared through-right lane into exclusive through lane; Move bus stop in southbound direction to south of intersection.	Lane restriping @ SB approach	\$1.50/LF new striping \$500/new pavement marking	\$ 7,005.00	Near-Term
	2nd Street/E Street	Add SBR overlap with EBL movement.	1 new signal head	\$5000/signal head	-	Add SBR overlap with EBL movement.	1 new signal head	\$5000/signal head	\$ 5,000.00	Near-Term
	2nd Street/Campus Drive	Remove westbound channelized right turn; Modify intersection control to uncoordinated, 4-phase signal.	Lane restriping for intersection 363 sf removal Signalize 1 Intersection	\$8/SF Demo \$500000/Intersection	\$ 603,484.80	Remove westbound channelized right turn. Modify intersection control to uncoordinated signalized intersection.	Lane restriping for intersection 363 sf removal Signalize 1 Intersection	\$8/SF Demo \$500000/Intersection	\$ 603,484.80	Long-Term
	B Street/3rd Street	Modify striping at northbound approach to consist of one northbound left turn pocket with 75 ft storage & 25 ft taper length by adding a red curb for 75 feet.	Lane restriping @ NB approach Paint curb red @ NB approach	\$1.50/LF new striping \$500/remove or new pavement marking \$5.00/LF red curb	\$ 3,030.00	Modify striping at northbound approach to consist of one northbound left turn pocket with 75 ft storage & 25 ft taper length by adding a red curb for 75 feet.	Lane restriping @ NB approach Paint curb red @ NB approach	\$1.50/LF new striping \$500/remove or new pavement marking	\$ 3,030.00	Near-Term
	B Street/Grand Street	-	-	-	-	Signal timing improvements.	signal timing	\$4500/Intersection	\$ 4,500.00	Near-Term
A Street	B Street/Watkins Street	Signal timing improvements.	signal timing	\$4500/Intersection	\$ 4,500.00	Signal timing improvements.	signal timing	\$4500/Intersection	\$ 4,500.00	Near-Term
	A Street/Mission Boulevard	Signal timing improvements.	signal timing	\$4500/Intersection	\$ 4,500.00	Convert westbound shared through-right lane into exclusive right turn lane.	Lane restriping @ WB approach	\$500/remove or new pavement marking	\$ 18,900.00	Near-Term
	A Street/Grand Street & Western Boulevard	Due to constrained ROW, no mitigation was proposed at this intersection.	-	-	-	Add westbound right turn overlap phase with southbound phase. Signal timing improvements.	Replace sign for WB approach 2 new signal heads	\$1000/new sign on mast arm \$5000/signal head	\$ -	-
	A Street/Happyland Avenue	Prohibit NBL movement at NB approach.	Lane striping "No Left-Turn" sign	\$500/new pavement marking \$550/new sign on new post	\$ 1,260.00	Prohibit NBL movement at NB approach.	Lane striping "No Left-Turn" sign	\$500/new pavement marking \$550/new sign on new post	\$ 1,260.00	Near-Term
	A Street/Hesperian Boulevard	-	-	-	-	Convert northbound shared through-right lane into an exclusive right-turn lane. Add NBR overlap with WBL movement; Add WBR overlap with SBL movement. Signal timing improvements.	Lane restriping @ NB approach Remove pavement marking @ WBR lane 4 new signal heads 1 "No U-Turn" sign	\$500/remove or new pavement marking \$5000/signal head \$1000/new sign on mast arm \$4500/Intersection	\$ 30,900.00	Near-Term
D Street	D Street/Grand Street	-	-	-	-	Add southbound right-turn pocket with 60 ft storage & 25 ft taper length by adding red curb; Convert southbound shared through-right lane into exclusive through lane.	Lane restriping @ SB approach Paint curb red @ SB approach	\$1.50/LF new striping \$500/remove or new pavement marking \$5.00/LF red curb	\$ 5,763.00	Near-Term
	D Street/Watkins Street	-	-	-	-	Signal timing improvements.	signal timing	\$4500/Intersection	\$ 4,500.00	Near-Term
	D Street/1st Street	Modify intersection control from TWSC to signalized intersection control.	Signalize 1 Intersection	\$500000/Intersection	\$ 600,000.00	Convert southbound approach to consist of one shared through-left lane and one exclusive right turn lane. Modify intersection control from TWSC to signalized intersection.	Lane restriping @ SB approach Signalize 1 Intersection	\$500/remove or new pavement marking \$500000/Intersection	\$ 602,400.00	Long-Term

Notes:  
 Projects proposed as part of Citywide Multimodal Study Mitigations  
 Projects proposed as part of 2040 General Plan, but no cost provided in GP. Hesperian Boulevard improvements were included in the Citywide Multimodal Study Existing Mitigations.  
 Mid-Term Projects from Summary of Near-Term and Mid-Term Improvements provided by City of Hayward  
 Red indicates improvements not included in cost calculation.

## **CHAPTER 6. NEXUS STUDY**

### **Nexus Fee Introduction**

#### ***Traffic Impact Fee/Nexus Fee***

This analysis provides the technical basis for establishing the required nexus between anticipated future development in the City of Hayward and the need for certain improvements to the local transportation facilities.

Traffic Impact Fees (TIF), or Nexus fees, are one-time fees typically paid prior to the issuance of a building permit and imposed on development projects by local agencies responsible for regulating land use. The fee's purpose is to help mitigate the transportation impacts of development growth. As an applicant proposes a project, a project-specific traffic impact study may be necessary, as this document only addresses cumulative impacts of all projects, but does not address specific impacts from a proposed development. In addition to fees and projects considered in this document, other on-site, frontage, and off-site improvements directly associated with future projects may be required. A project-specific traffic impact study will assess this.

To guide the widespread imposition of public facilities fees, the State Legislature adopted the Mitigation Fee Act (the Act) with Assembly Bill 1600 in 1987 and subsequent amendments. The Act, contained in California Government Code §§66000-66025, establishes requirements on local agencies for the imposition and administration of fee programs. The specific tasks performed in preparing this analysis and their results are summarized in this Chapter.

#### ***Congestion Management Program***

The CMP is mandated by State law and is maintained for the County by the Alameda County Transportation Commission (ACTC). The CMP is a comprehensive transportation improvement program with the goal to reduce traffic congestion, improve air quality, and inform land use decisions. The ACTC has established a list of major intersections monitored for congestion with Level of Service (LOS) standards set by the CMP statute.

The Citywide Multimodal Improvement Plan (MIP), also referred to as the Deficiency Plan per state's Congestion Management Program (CMP) legislation, is a plan that identifies offsetting measures to improve transportation conditions on the CMP transportation network in lieu of making physical traffic capacity expansions such as widening an intersection or roadway. The CMP legislation requires local jurisdictions to prepare MIPs for CMP system facilities located within their jurisdictions that exceed the established ACTC traffic LOS standard, LOS E. The legislation allows the MIPs to trade off a traffic LOS violation on one particular CMP System facility for transportation system improvements to other facilities or services and contribute to an improvement in air quality. MIPs can be a way for local jurisdictions to pursue multimodal improvements (such as bicycle, pedestrian, transit, or Transportation Demand Management (TDM) measures) or off-setting auto capacity improvements when it is infeasible or undesirable to make physical traffic capacity improvements at an impacted location. If adopted, the Nexus fee described in this report would provide funding toward MIP projects through funds paid by developers.

**Traffic Impact/Nexus Fee Development Process**

The development of the MIP Nexus fee program involved the major tasks described below.

1. **List of Projects** The MIP includes the list of projects for the TIF program. All projects identified for inclusion in the fee program were presented in Chapter 5 of this report.
2. **Project Costs** The projects had low-cost and high-cost alternatives and were categorized into short-term, near-term and long-term improvements as part of the Action Plan. The project costs were identified in Chapter 5 of this report. The existing cost for vehicular improvements was adjusted to account for existing deficiencies, which are not eligible for TIF funding. Only 20 percent of existing cost for vehicular improvements was added to total vehicular improvement cost.
3. **Trip Generation** An estimate was prepared of the A.M. and P.M. peak hour trip generation that will result from development of the expected future land uses within the City of Hayward.
4. **Cost per Trip** A cost per trip was calculated along with the corresponding schedule of fees. The schedule of fees includes fee categories for residential units, hotel, office, school, service/retail and other standard land uses.

**Existing and Future Peak Hour Trips**

A key step in the fee development process is to determine the number of trips that will be generated by growth within the City during the life of the fee. TJKM used General Plan travel demand model to extract the all trips that have origin and/or destination within the City of Hayward. **Table 22** below summarizes the trips growth within the City by A.M. peak hour and P.M. peak hour

**Table 22: Determination of TIF Trips**

Scenarios	2005 (trips)	2040 (trips)	Trip Growth from 2020 to 2040
A.M. Peak Hour	45,564	63,929	10,495
P.M. Peak Hour	52,017	73,934	12,524

Source: TJKM 2021

It is noted that the planned growth during this period are 10,495 during A.M. peak hour and 12,524 during P.M. peak hour trips. This number should be adjusted each time the MIP TIF is updated to reflect the latest cost of projects and most recent land use projections.

**Improvement Projects and Cost Estimate**

In the previous section, all improvement projects were identified for inclusion in the Nexus fee program. These projects, their costs, and the proportion of the costs to be shared by others, are presented in Chapter 5. Transit improvement costs may be funded by the AC Transit, however, are included in the Nexus cost. No other sources of funding are available for all improvement projects identified in Chapter 5. **Table 23** presents proposed TIF projects and costs.

**Table 23: Proposed TIF Projects and Costs**

#	Project	Low Cost	High Cost
1	Bicycle Improvement Projects	\$7,300,000	\$18,400,000
2	Pedestrian Improvement Projects	\$108,300,000	\$124,000,000
3	Transit Improvement Project	\$1,896,200	\$14,943,624
4	Vehicular Improvement Project	\$26,140,000	\$26,140,000
Total		\$143,636,200	\$183,483,624

The costs of these projects have been calculated in dollars. The proposed Hayward TIF ordinance will make provisions for annual adjustments to the fee based on published construction cost indices. In this way, any escalation in construction costs will be covered by commensurate fee adjustments.

**Program Costs and Fee Calculation**

**Table 24** presents a summary of the TIF improvement project costs, the projected future trips to be added by new development, and the resulting estimated TIF improvement cost per trip. The total costs of the TIF projects to be included are \$143,636,200 (low cost) and \$183,483,624 (high cost). State law allows the City to include costs associated with administering the Fee program in the Fee. These administrative tasks include required reporting and enforcement, and are conservatively estimated at 1% of the total project costs.

The fee calculation is based on trip generation estimates in **Table 22** and the cost estimates of the TIF improvement projects. The TIF improvement project costs as well as the calculated new TIF cost per trip are shown in **Table 24**.

**Table 24: Cost per Trip Estimate**

	A.M. Peak Hour		P.M. Peak Hour	
	Low Cost	High Cost	Low Cost	High Cost
All Projects	\$143,636,200	\$183,483,624	\$143,636,200	\$183,483,624
Plus Administrative Costs (1%)	\$1,436,362	\$1,834,836	\$1,436,362	\$1,834,836
Total TIF Funding	\$145,072,562	\$185,318,460	\$145,072,562	\$185,318,460
Total Peak Hour Trips Added by New Development	10,495	10,495	12,524	12,524
<b>TIF Cost Per Trip</b>	<b>\$13,824</b>	<b>\$17,659</b>	<b>\$11,584</b>	<b>\$14,797</b>

**Table 25** and **Table 26** present the new schedule of fees. The land use categories in this fee schedule have been determined based on a range of expected development land use types. The fees are calculated by multiplying the ITE trip rates contained in *Trip Generation, 10<sup>th</sup> Edition* for the A.M. and P.M. peak period by the cost per trip.

The resulting fee rate, shown in the last columns of **Table 25** and **Table 26** are the rate per dwelling unit for residential development, per employee for lodging development, or per thousand square feet (KSF) for non-residential development. The trip rate factor for the retail land use was adjusted (reduced 60%) to account for the pass-by-trips. The trip rate factor for the gas station land use was adjusted (reduced 70%) to account for the pass-by-trips.

**Table 25: Calculations of Fees based on A.M. trips (Per KSF<sup>1</sup> unless noted)**

Land Use Category	A.M. Trip Rate <sup>2</sup>	Cost Per A.M. Trip		Fee Rate	
		Low Cost	High Cost	Low Cost	High Cost
Retail <sup>3</sup> /KSF	1.2	\$13,824	\$17,659	\$16,588	\$21,190

**Other Factors in TIF**

Establishment of Final TIF - The City may decide not to levy the maximum fee that has been established as a part of this study as it may reduce development feasibility, make the City less competitive with its peers, or other purposes. The Final TIF will be established through resolution amending the Master Fee Schedule.

Intensification or Change in Land Use - When a land use is intensified, such as replacing a group of single family homes with multi-family homes, the fee to be charged is the difference in calculated fees for the two land uses. The same principle is applied with changes in land use, such as demolishing an industrial building to build a residential development.

Other Land Uses - The City may decide to use the \$13,824 (low cost) and \$17,659 (high cost) per A.M. peak hour trip rate and to use the \$11,584 (low cost) and \$14,797 (high cost) per P.M. peak hour trip rate to apply to other specific land uses not covered by **Table 25** and **Table 26**. The latest edition of ITE's *Trip Generation* should be used as a source for A.M. and P.M. peak hour trip rates.

### **Nexus Findings**

TIF's are one-time fees typically paid prior to the issuance of a building permit and imposed on development projects by local agencies responsible for regulating land use (cities and counties) to mitigate the transportation impacts of the development. To guide the widespread imposition of public facilities fees, the State Legislature adopted the Act with Assembly Bill 1600 in 1987 and subsequent amendments. The Act, contained in California Government Code §§66000-66025, establishes requirements on local agencies for the imposition and administration of fee programs. The Act requires local agencies to document five findings when adopting a fee.

The five statutory findings required for adoption of the maximum justified fee documented in this report are presented in this chapter and supported in detail by this report. All statutory references are to the Act.

#### **1. Purpose of the Fee**

For the first finding, the City must:

*Identify the purpose of the fee. (§66001(a)(1))*

The purpose of this fee is to implement the actions of the Citywide MIP, which is mandated under ACTC's Congestion Management Program when regional intersections fall below LOS E. The imposition of impact fees is one of the preferred methods of ensuring that development bears a proportionate share of the cost of capital facilities necessary to accommodate new development. This fee will charge new development the fair share cost of transportation improvements needed to mitigate the transportation impacts created by that development.

#### **2. Use of Fee Revenues**

For the second finding, the City must:

*Identify the use to which the fee is to be put. (§66001(a)(2))*

If the use is financing public facilities, the facilities shall be identified. That identification may, but need not, be made by reference to a capital improvement plan as specified in Section 65403 or 66002, may be made in applicable general or specific plan requirements, or may be made in other public documents that identify the public facilities for which the fee is charged.

#### **3. Benefit Relationship**

For the third finding, the City must:

*Determine how there is a reasonable relationship between the fee's use and the type of development project on which the fee is imposed. (§66001(a)(3))*

The City has determined that the improvements listed in the report are necessary to address deficiencies related to traffic congestion and CMP compliance, as identified in the MIP and the City's environmental documents, due to future development under the 2040 General Plan. Public facilities funded by the fee will provide a network of transportation infrastructure accessible to the additional residents and workers associated with new development, resulting in mobility and accessibility benefits to the new development. Thus, there is a reasonable relationship between the use of fee revenues and the new residential and nonresidential development that will pay the fee.

#### **4. Burden Relationship**

For the fourth finding, the City must:

*Determine how there is a reasonable relationship between the need for the public facility and the type of development project on which the fee is imposed. (§66001(a)(4))*

The number of residential dwelling units and building square footage are indicators of the demand for transportation facilities needed to accommodate growth. As new building square footage is created, the occupants of the new structures will place additional burdens on the transportation facilities. The need for the fee is based on traffic engineering studies assessing the impact of additional vehicle trips from new development as well as City policies governing the design of a transportation system needed to serve new growth areas. Traffic engineering and related data were also used to inform the scope of improvements included in the fee program. For transportation improvements needed to accommodate the development anticipated in the near term, the cost burden is fully allocated based on development anticipated in the near term. For transportation improvements that are not immediately needed to accommodate near term development, but that will be needed to accommodate development in the longer term, the cost burden is allocated based on projections of new development. Thus, there is a reasonable relationship between the need for the planned improvements, the scope of the improvements, and the parcels that will pay the fee.

#### **5. Proportionality**

For the fifth finding, the City must:

*Determine how there is a reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed. (§66001(b))*

There is a reasonable relationship between the TIF for a specific development project and the cost of the facilities attributable to that development based on the estimated vehicle trip demand the development will generate in the MIP. The total fee for a specific development is based on its planned square footage for nonresidential uses, the number of rooms for lodging uses, and the number of dwelling units for residential uses. Larger projects of a certain land use type will have a higher trip generation and pay a higher fee than smaller projects of the same land use type. Thus, the fee schedule ensures a reasonable relationship between the TIF for a specific development project and the cost of the facilities attributable to that project.

**6. Impact Fees in Other Cities**

Transportation Impact Fees (TIF) of numerous nearby cities were shown in **Table 27** in order provide context for considering Hayward citywide TIF.

**Table 27: TIF from Nearby Cities**

City	Single Family/d.u.	Multi-Family/d.u.	Office/KSF	Retail/KSF	Industrial/KSF	Cost/Trip

## **CHAPTER 7. CONCLUSION**

### **Existing Conditions Analysis**

Under Existing Conditions, the traffic operation and traffic safety within the study area are summarized below:

- 1 percent of the collisions are fatal collisions.
- 52 percent of the collisions are injury collisions.
- Broadside & rear-end are the main types of traffic collisions at the study intersections.
- 26 out of 70 signalized intersections operate at LOS E or F.
- 21 out of 30 unsignalized intersections operate at LOS E or F.
- Two out of 15 study segments operate at unacceptable conditions during at least one peak period. Both failing segments are CMP roadways.
- Seven out of 21 failing, unsignalized intersections meet the peak hour signal warrant for one or both peaks.
- 33 out of 47 failing intersections improve from unacceptable to acceptable operations during one or both peak hours when mitigations are applied.

### **Developing Traffic Forecast and Future Conditions Analysis**

The Future (2040) Conditions traffic flows were projected with a growth rate developed from the City of Hayward CUBE Model. Under Future Conditions, the traffic operation and traffic safety within the study area are summarized below:

- 24 out of 70 signalized intersections operate at LOS F during the a.m. peak.
- 27 out of 70 signalized intersections operate at LOS F during the p.m. peak.
- 23 out of 30 unsignalized intersections operate at LOS E or F during the a.m. peak.
- 21 out of 30 unsignalized intersections operate at LOS E or F during the p.m. peak.

### **Multimodal Improvement Projects and Action Plan**

TJKM proposed multimodal improvement projects in the City of Hayward for bicycle, pedestrian and vehicular facilities based on the Intersection and roadway level of service analyses completed as part of this study, and recommendations made in previous plans adopted by the City. The improvement costs were developed with project and unit costs provided in the Bicycle and Pedestrian Master Plan and by the City. The action plan was developed based on information provided in the Bicycle and Pedestrian Master Plan and by the City of Hayward.

### **Nexus Study**

The TIF improvement costs per trip were developed based on the projected future trips to be added by new developments and the multimodal improvement project costs calculated as part of this study. The total costs of the TIF projects are \$143,636,200 (low cost) and \$183,483,624 (high cost). The TIF cost per trip are as follows:

- Low Cost A.M. Peak - \$13,824
- Low Cost P.M. Peak - \$11,584
- High Cost A.M. Peak - \$17,659
- High Cost P.M. Peak - \$14,797

Minor Approach Volume Threshold:	588											

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.
