### Recycling

Do you ever wonder if recycling is important? Well it is, because paper, pencils, wooden chairs and wooden tables are all made of trees. Then if you don't recycle we'll have to keep on cutting down trees and if we do that we're going to have a flood when it rains. If we have a flood all houses will be destroyed. Some houses on the mountain will fall down because it will get slippery on the bottom and fall down and people might die if they're in the houses. But if we recycle all the paper pencils and the rest will be used again. If keep on doing that all trees will be sucked up by the roots of trees. That's why recycling is important. Recycling plastic is very important because plastics will never melt even for so many years. That will hurt our environment as a whole.

### My Pledge

As a child and a responsible student we need to protect and take care of our Mother Earth for our future.
