How Does Recycling Help the Environment?

How does recycling help the environment? Recycling helps the environment in thousands of ways. It means better lives for plants, animals, and living things including us.

Recycling keeps the landfill from overflowing into our backyard that means cleaner neighborhood and streets.

Recycling helps to prevent from manufacturing things over and over when we can reuse it. Manufacturing could sometimes hurt the environment. We need a clean and healthy environment for our future.

Recycling uses garbage and turns it into useful things that we use every day. Recycling shows that we care about our world and future. The environment is our future.

The more we recycle the better the environment and our future. We all from children through grandparent. Recycling is the easiest way to protect our environment.
