Saving The World One Can at a Time

The last tree has been cut down. We should have listened to the environmentalist. They told us to stop, we did not listen. Now we can't build anymore houses, make paper, and millions of animals have lost their homes. This is going to be our future unless we start doing something about it. One way to help is to recycle. Recycling can not only help save trees, but it also helps the environment. In this essay, I will discuss what happens if we don't recycle, how recycling helps the environment, and how you can help.

If we don't recycling our world will not be the same. How would it be different? First, there would be mountains of garbage all over the world. Second, plastic and paper would become more expensive, due to the lack of materials needed to make them. Third, the world would look like if it was hit by hundreds of asteroid, because of all the excavating needed t find aluminum, while we could have just recycled our empty soda cans. Finally, according to premote.org, if we don't recycle the water in landfills it will produce pollution. Pollution leads to global warming, which leads to our ozone layer vanishing. Do you want to live in this world? I know I don't.

Recycling is saving our environment. How? First, fewer trees have to be cut down and more animals keep their homes. Next, it saves the energy that would be needed to create glass bottles and aluminum cans. It takes 5% of the energy needed to make a new aluminum can to recycle and old aluminum can. This energy saved leas to less pollutants going into the atmosphere. Third, natural resources are like a giant jaw breaker; you think it's never going to run out, but when it does you are going to be sorry. Recycling helps us use less of our natural resources. Finally, according to the earth911.com, recycling keeps garbage out of landfills that we can make into new products. Our environment depends on us recycling.

Anyone can recycle or help the environment. What can you do? First, don't throw something away if you can use it again. Second, if you see garbage on the street, throw it away before it ends up in an ocean or somewhere else. Third, it is as easy to recycle as it is to count to three. You don't even have to change your lifestyle. All you have to do is throw away paper, plastic, aluminum and a glass in a bin or container where they get reused.

In conclusion, I have just discussed the impact of recycling on the environment, and how you can help. Recycling is the process of reusing an old material and processing it into a new useful material, while saving natural resources and stopping pollution. You can recycle plastic, aluminum, and glass in a bin or container where they get reused. Finally, according to ncr-recycle.org, in some states they pay for recycling aluminum cans and other items, while saving our planet. You and anyone else can start helping our environment.

In conclusion, I have just discussed the impact of recycling on the environment, and how you can help. Recycling is the process of reusing an old material and processing it into a new useful material, while saving natural resources and stopping pollution. You can recycle plastic, paper, aluminum, glass and many other things. What I have learned while doing this essay is that I do not want to live in a world where we have used all our natural resources, and where there is waste all over the world. I hope you have learned to take care of our environment, because we only have one.
