

## Recycling

Hello, my name is Omar Choto. I'm nine years old and I'm in 4th grade in Eldridge School. I am going to talk about how recycling helps the environment. This essay is about the planet that I have to take care of, so when I grow-up there is still a nice planet,

In January, I went to the dump with my teacher and my classmates. They taught me how to recycle. They showed me how to separate materials and which ones are reusable materials.

I think that I can help my planet doing less trash using less plastic using more glass, boxes, and paper. When you throw the trash away, separate the materials. For example: pizza box, food scraps, food. These materials go in the green container. Garden waste also goes in the green container. All the plastic, carton, and cans go in the black container.

Another way to recycle is to separate for example: batteries, electronics, refrigerators, cameras, computers, T.V.s, vacuums, DVR's. All these things can be recycled too. You can also recycle old wood. One other thing that you can recycle is furniture. You can also recycle plastic bags, photos, and posters.

To help the environment you should always recycle so that the world could be a better place to live. Everyone has to recycle because it is important to recycle. To make sure every thing is okay is to check that you don't recycle food, plants, metal. Truly, my conclusion is that recycling is a great thing to do for the world.
