Why Should We Recycle?

Written by Jennifer Buenrostro

It is important to recycle so that the world can be clean and beautiful. My mom always says that recycling is important because we can help save the world. My dad says that we can always recycle old aluminum cans and make them into new ones. My brother also says that food that we often throw away in the trash can be composted instead of going into the landfill. I think it's fun to recycle bottles, plastic, and paper. Everyone can recycle.

I like to recycle because I know that recycling can help the world and all of the animals that live on our planet. This is why it is so important that we recycle so that the world can be clean, nice, and beautiful. We're also making less trash when we recycle so there is less pollution and less contamination and we are helping make our world a wonderful place to live in.
